Basil Davidson's famous book -- now updated in a welcome Third Edition -- reviews the social and political history of Africa in the twentieth century. It takes the reader from the colonial era through the liberation movements to independence and beyond. mood of his new final chapter is hopeful and buoyant.

Africa South of the Sahara - Robert F. Stock 1995

Africa south of the Sahara is a region in transition. The optimism of the early postindependence years has long since faded, replaced by a pervasive sense of crisis that typically includes slow and often negative economic growth, a crushing debt burden, hunger and ecological crisis, and the virtual collapse of the state in a number of countries. At the same time, the 1990s have seen recent cause for hope -- most dramatically, in the peaceful transition to black majority rule in South Africa. This much-needed text provides a broad and balanced introduction to the geography of this vast region. Examining sociocultural, political, and economic processes, patterns of resource utilization, and the dynamics of change in Africa's geography, the text is enhanced by vivid case studies, maps, and photographs. Also featured are lists of recommended reading and a glossary of key terms.

Future Energy - Trevor M. Letcher 2008-07-30
Future Energy will allow us to make reasonable, logical and correct decisions on our future energy as a result of two of the most serious problems that the civilized world has to face; the looming shortage of oil (which supplies most of our transport fuel) and the alarming rise in atmospheric carbon dioxide over the past 50 years (resulting from the burning of oil, gas and coal and the loss of forests) that threatens to change the world's climate through global warming. Future Energy focuses on all the types of energy available to us, taking into account a future involving a reduction in oil and gas production and the rapidly increasing amount of carbon dioxide in our atmosphere. It is unique in the genre of books of similar title in that each chapter has been written by a scientist or engineer who is an expert in his or her field. The book is divided into four sections: • Traditional Fossil Fuel and Nuclear Energy • Renewable Energy • Potentially Important New Types of Energy • New Aspects to Future Energy Usage Each chapter highlights the basic theory and implementation, scope, problems and costs associated with a particular type of energy. The traditional fuels are included because they will be with us for decades to come - but, we hope, in a cleaner form. The renewable energy types includes wind power, wave power, tidal energy, two forms of solar energy, bio-mass, hydroelectricity, geothermal and the hydrogen economy. Potentially important new types of energy include: pebble bed nuclear reactors, nuclear fusion, methane hydrates and recent developments in fuel cells and batteries. -

Written by experts in the key future energy disciplines from around the globe - Details of all possible forms of energy that are and will be available globally in the next two decades - Puts each type of available energy into perspective with realistic, future options

When the Sahara Was Green - Martin Williams
2021-10-05

The little-known history of how the Sahara was transformed from a green and fertile land into the largest hot desert in the world. The Sahara is the largest hot desert in the world, equal in size to China or the United States. Yet, this arid expanse was once a verdant, pleasant land, fed by rivers and lakes. The Sahara sustained abundant plant and animal life, such as Nile perch, turtles, crocodiles, and hippos, and attracted prehistoric hunters and herders. What transformed this land of lakes into a sea of sands? *When the Sahara Was Green* describes the remarkable history of Earth's greatest desert—including why its climate changed, the impact this had on human populations, and how scientists uncovered the evidence for these extraordinary events. From the Sahara's origins as savanna woodland and grassland to its current arid incarnation, Martin Williams takes us on a vivid journey through time. He describes how the desert's ancient rocks were first fashioned, how dinosaurs roamed freely across the land, and how it was later covered in tall trees. Along the way, Williams addresses many questions: Why was the Sahara previously much wetter, and will it be so again? Did humans contribute to its desertification? What was the impact of extreme climatic episodes—such as prolonged droughts—upon the Sahara's geology, ecology, and inhabitants? Williams also shows how plants, animals, and humans have adapted to the Sahara and what lessons we might learn for living in harmony with the harshest, driest conditions in an ever-changing global environment. A valuable look at how an iconic region has changed over millions of years, *When the Sahara Was Green* reveals the desert's surprising past to reflect on its present, as well as its possible future.

Wealth, Poverty and Politics - Thomas Sowell
2016-09-06

In *Wealth, Poverty, and Politics*, Thomas Sowell, one of the foremost conservative public intellectuals in this country, argues that political and ideological struggles have led to dangerous confusion about income inequality in America. Pundits and politically motivated economists trumpet ambiguous statistics and sensational theories while ignoring the true determinant of income inequality: the production of wealth. We cannot properly understand inequality if we focus exclusively on the distribution of wealth and ignore wealth production factors such as geography, demography, and culture. Sowell contends that liberals have a particular interest in misreading the data and chastises them for using income inequality as an argument for the welfare state. Refuting Thomas Piketty, Paul Krugman, and others on the left, Sowell draws on accurate empirical data to show that the inequality is not nearly as extreme or sensational as we have been led to believe. Transcending partisanship through a careful examination of data, *Wealth, Poverty, and Politics* reveals the truth about the most explosive political issue of

our time.

Since 2000, when the previous edition appeared, further big changes occurred, with the rise of new political leaders and of a new black middle class. There were also serious problems in governance, in public health, and the economy, but with a remarkable popular resilience too. Historical Dictionary of Angola

James 2018-03-01

Angola, slowly recovering from a twenty-seven year civil war, is becoming a regional super-power in southern Africa. This rise can be attributed to oil, diamonds, a battle-tested armed forces and a political system that is dominated by one party - the Movimento Popular de Libertação de Angola (the Popular Movement for the Liberation of Angola - MPLA). Problems remain to be solved. The vast wealth is

in the control of the elite while the vast majority of the people live on less than two dollars per day. Corruption is rife, the health and education system in shambles, landmines remain a festering problem and the opposition is intimidated and split into various factions.

President Eduardo dos Santos, who has ruled Angola for almost thirty-eight years, has opted not to run for re-election in the August 2017 elections. Instead his hand-picked successor João Lourenço was elected president.

Interestingly, dos Santos has not surrendered his presidency of the party. This third edition of *Historical Dictionary of Angola* contains a chronology, an introduction, appendixes, and an extensive bibliography. The dictionary section has over 700 cross-referenced entries on important personalities, politics, economy, foreign relations, religion, and culture. This book is an excellent resource for students, researchers, and anyone wanting to know more about Angola.

This third revised edition is a thorough exploration of the evolution of mankind in Africa. Latest facts and speculations have been reviewed and narrated with the author's insights and commentary. This is an inclusive study with an emphasis on the need to examine the seashore as a vital part of our ancestral story. It is surely high time to end the narrow vision of excluding African Indian Ocean seashores from five million years of hominin evolution.
