High Finance - Logan C. Kane 2016-12-27

Your 20 million dollars is already in the bank, it's just in someone else's bank right now! I wrote High Finance: The Secrets Wall Street Doesn't Want You to Know in late 2016. Since then, I have made sales not only in the United States and Canada, but also in 17 other countries, places like France, Germany, Hungary, South Korea, and China. The main theme of my book is that Wall Street beats retail investors through a series of small edges that add up to billions of dollars, much like the house edge at the casino. I show you where these edges are and how you can avoid them. When I published my book, everyone predicted that I would sell 100 copies or so, mostly to family and friends. They were wrong. Just like there are a lot of naysayers in publishing, there were a lot of naysayers who said I wouldn't make any money trading stocks. They were also wrong. I think you should raise your expectations. Have the courage to dream bigger, do bigger deals, and go take what you want. Whether you choose to steadily grow your capital through prudent, low cost investment or by grinding out profitable trade after profitable trade, you are capable of achieving your goals. There's a lot of ways to make money in the markets, and you are free to switch strategies whenever. There is no shortage of money in this world; the money just isn't equally distributed. Someone gets to live in every mansion and penthouse all over the world, and my question is, what if it could be you? Smart investing and trading can make you more money than you have ever dreamed; faster than you thought was possible. Trading options and stocks paid for my first car, paid for me to travel the world, and put a lot of extra cash in my pocket over the years. It can do the same for you.

What you might be thinking: If I am so good at playing the markets, why am I writing a book about it? The truth is, a lot of people want to throw me money to trade for them, but I don't have the time or the inclination to deal with hundreds of clients. I genuinely enjoy helping people win in the markets, and making a passive 5 dollars a copy multiplied by the thousands of people I am able to help is a win-win. The Wall Street sharks have a constant supply of fish, and this book is only a drop in the ocean. Since you are reading though, you're on my team. Let me show you how the game works, what the rules are, how you can win. Inside: Examples of winning stock and option trades I made, and how you can replicate them. Why commissions and fees are the number one obstacle facing most investors and traders, and how you can drastically reduce them, regardless of your trading style. A simple secret that makes you a little more profit on every trade, by applying the power of negotiation to the stock market. How credit card lending became one of America's most profitable industries, and how investors can get a piece of the action through P2P lending. A trick to passively generate capital gains when investing in bonds. An introduction to the elegantly simple Kelly Criterion, originally used by professional gamblers. The Kelly Criterion helps you control risk when trading and maximize your average profit. How eastern philosophy can help you improve your trading game. Formulas for estimating stock and bond returns. A quick overview of asset protection strategies. Tax saving moves for investors at every income level, and much more. Logan C. Kane has helped countless people with his techniques and strategies, and he can help you too. No

Developmental Assignments - Cynthia D. McCauley 2006-01

This book is modeled after "Eighty-eight Assignments for Development in Place," one of CCL's most popular publications. In the years since that report was published, we have learned more about development in place-from research, from working with managers and organizations that are making use of developmental assignments, and from our colleagues in the field. We believe it is time once again to consolidate our knowledge into one tool to help leaders add developmental assignments to their own jobs and help others do the same. The tables inside this book are full of assignments. You'll also find cross-references to CCL's assessment tools: 360 by Design, Executive Dimensions, Benchmarks, Prospector, and Skillscope. If you want to target the development of specific competencies as a result of receiving feedback from any of these, the cross-references will direct you to appropriate assignments.

Housing Allowances in Comparative Perspective - Peter Kemp 2007-07-11

Housing allowances have become increasingly important policy instruments in the advanced welfare states. Operating at the interface between housing and social security policy, they provide means-tested assistance with housing costs for low income households. In the present era of fiscal austerity, such schemes are seen by many governments as a more efficient way to help tenants than rent controls or 'bricks and mortar' subsidies to landlords. Yet as the contributions to this collection show, housing allowances are not without problems of their own, especially in relation to housing consumption and work incentives. This book examines income-related housing allowance schemes in advanced welfare states as well as in transition economies of central and eastern Europe. Drawing on experiences in ten countries, including Britain, Sweden, Germany, Australia and the USA, it presents new evidence on the origins and design of housing allowances; their role within housing and social security policy; their impact on affordability; and current policy debates and recent reforms. Unique in its depth of coverage, Housing Allowances in Comparative Perspective is essential reading for researchers, students and lecturers in social policy, housing and urban studies.

Competition Between Social and Private Rental Housing - Christian Lennartz 2013

In the context of shifting regulatory approaches and changing provision structures in many Western rental housing systems, the notion of competition between social and private rental housing has received increasing attention from practitioners and academic researchers. This thesis explores and theorizes the concept of inter-tenure competition in order to advance understanding of what it means in local and national market realities, as well as in business and political practices. Results indicate that competition in mixed markets is a complex matter, much of which is explained by the distinctive properties of social and private De Kwetsbare Psychisch Gestoorde Verdachte in Het Strafproces - Eline Marloes Gremmen 2018

Swing Trading using the 4-hour chart 3 - Heikin Ashi Trader 2016-09-06

Swing Trading using the 4-hour chart Part 3: Where Do I Put My stop? In the third part of the series on "Swing Trading using the 4-hour chart", the Heikin Ashi Trader treats the question on where the stop should be. Once a trader stops introducing stops, he will discover that his hit rate will worsen. However, by doing this he gains full control of the trade management. Stops are therefore not unavoidable, but remain an integral part of a trading system that is profit-oriented. Well understood

stops are downright the actual instrument that makes profit possible. Since money is only earned when he exits the trade, the trader should try to perform the stop management with the utmost care. The formulation of crystal-clear rules, both for trend trades as well as for trades with a fixed target, after all, is the requirement to ensure that the trader is playing his own game. Every successful trader has ultimately developed his own rules. No matter what the market does, this trader always plays his own game and can be swayed by anything. Precisely the persistence and consistency with which he operates in the market ensures that he becomes one day the "Master of the Game".

Gorillas, markets and the search for economic values - Abraham Bob Hoogenboom 2013

The nickname of the Lehman CEO Dick Fuld was 'The Gorilla of Wallstreet'. In Gorillas, Markets and the Search for Economic Values the Nyenrode academic community discusses the five years following the Lehman Brothers demise (as a metaphor for the ongoing financial crises). We try to understand the complexities of the financial crises for future research and lecturing. Do the crises challenge common wisdom? Can long-standing theoretical models stand the test of ongoing turbulences in markets and financial institutions? Are relationships between governments, markets and regulation in dire need of redefinition? What are explanations and remedies for the crises? In short: what's new? Four themes are discussed that could spark theoretical innovations. We offer governments, regulators, financial

institutions, shareholders, companies, and clients suggestions, tools, and mentalities to address the crises. The themes are: The blame game Psychology and culture Reinventing regulation and overcoming information asymmetry Other business models, new values Bron: Flaptekst, uitgeversinformatie.
