Modeling of Atmospheric Chemistry Guy P. Brasseur 2017-06-19

Mathematical modeling of atmospheric composition is a formidable scientific and computational challenge. This comprehensive presentation of the modeling methods used in atmospheric chemistry focuses on both theory and practice, from the fundamental principles behind models, through to their applications in interpreting observations. An encyclopaedic coverage of methods used in atmospheric modeling, including their advantages and disadvantages, makes this a one-stop resource with a large scope. Particular emphasis is given to the mathematical formulation of chemical, radiative, and aerosol processes;

advection and turbulent transport; emission and deposition processes; as well as major chapters on model evaluation and inverse modeling. The modeling of atmospheric chemistry is an intrinsically interdisciplinary endeavour, bringing together meteorology, radiative transfer, physical chemistry and biogeochemistry, making the book of value to a broad readership. Introductory chapters and a review of the relevant mathematics make this book instantly accessible to graduate students and researchers in the atmospheric sciences.

The Call of the Osprey - Dorothy Hinshaw Patent 2015-06-02

"Patent's lucid prose and Muñoz's clear color photos work together to document the efforts of the Montana Osprey Project . . . a stellar series."—School Library Journal This meticulously researched and photographed account follows three University of Montana scientists and their interdisciplinary work with osprey: fish-catching birds with gigantic nests and a family that functions with teamwork and cooperation. Today the osprey is studied to monitor the effects of mercury on living things. The osprey hunts in a very small area around its large nest and so scientists can pinpoint where mercury is coming from. In Missoula, Montana, the scientists have been following ospreys for six years, collecting data on the amount of contaminants found on their feathers and in their blood. The rivers and streams in Western Montana are still suffering effects from inappropriate mining activities performed more than a hundred years ago. This man-made pollution is still dangerous to people and to wildlife. "Demonstrates how studying these birds may help address some knottier scientific problems. More science than adventure, this is a challenging addition to the Science in the Field series."—Kirkus Reviews "Readers who prefer to shortcut straight to the birds themselves will be particularly pleased not only with the myriad photographs but also with inserts on the nesting pairs."—Bulletin International Symposium: Biological Aspects of Alcohol Consumption, 27 - 29th September 1971 - Olof Forsander 1972

Atomic Physics 8 - I. Lindgren 2012-12-06

The Eighth International Conference on Atomic Physics was held at Chalmers University of Technology, Goteborg, Sweden on August 2-6, 1982. Following the tradition established by earlier conferences in the series, it was attended by 280 participants from 24 countries. A total of 28 invited talks were delivered at the conference. These talks, which are presented in this volume, covered a wide range of topics in atomic physics in a broad sense. They extend from very basic problems (e.g., the interpretation of quantum mechanics in light of Bell's theorem and the feasibility of relativistic many-body calculations) to applied problems (e.g., laser detection of trace elements and spectroscopy of chemisorbed molecules). Professor M.Ya. Amusia was unable to attend the conference but his invited paper is included here. Professor V.S. Letokhov presented a talk entitled "Prospects of Laser Detection of Very Rare Isotopes, but was unable to provide a manuscript. At the conference, 175 posters were presented. Abstracts have been published in a separate volume. It is very much appreciated that all the 1981 Nobel laureates, Nicolaas Bloembergen, Arthur Schawlow and Kai Siegbahn, were able to attend and deliver their invited talks. Professor Schawlow summed up the conference and this too is presented here. The conference also benefited considerably from the presence of Professor I.I. Rabi, who gave a much appreciated talk at the conference dinner. As this talk was given without a manuscript, it could unfortunately not be included here.

The Release of Genetically Modified Microorganisms—REGEM 2 - Duncan E.S. Stewart-Tull 2012-12-06

If ripple effect is a measure of greatness in scientific discovery then GEMMOs have a lot going for them and this book dramatically illustrates the risks associated with advances being made by researchers to mobilize and control the power of the microorganism in the world's fight to perfect nature and find remedies for its imperfections. In the field of genetic science it is abundantly clear that so much more can be achieved through prevention rather than cure and that the indirect kill, by reason of its logic is a much more powerful weapon for winning results.

Nevertheless the dilemma facing politicians arises over whether man should tamper with something which is God-given such as Radioactivity and Genetic endowment. The Roman Catholic church finds difficulty in accepting the proposition that what is God given can be treated as a product under human control and maybe that is why recently half a century of genetic research on a strain of bees resistant to a devastating parasite at the Buckfastleigh Benedictine Monastery has inexplicably ceased whilst verging on scientific success. (1) The Anglican Community on the other hand does not see the sacrosanctity of Radioactivity and Genetic material as a bar to man-manipulation with appropriate safeguards.

Drugs and the Inheritance of Behavior - P. Broadhurst 2012-12-06

The title of any monograph must necessarily be a compromise between brevity and precision, and the needs of this compromise are particularly pressing in a newly emerging area of scientific interest, one that is not only inter- or bidisciplinary, but tridisciplinary, involving as it does psychology, pharmacology, and genetics. The temptation to call this work "psychopharmacogenetics" -tout court, if the phrase can be applied to so polysyllabic a construction-was removed by the timely appearance of the book under that title edited by Eleftheriou (1975b). Accordingly, something less novel has been chosen. It might be thought to promise more than it delivers and to delineate a wider field than it covers, but I have sought to add a corrective degree of precision in the subtitle which accurately defines what is intended even at the cost of further polysyllabification. The survey of a disparate field of this kind entrains difficulties that go beyond what to call it. The claims of the parent disciplines for methodological supremacy are strong and difficult to resist. What I have done is to seek to impose a degree of coherence on the chosen area by always inquiring to what extent a particular methodology, derived from one part of one of them only, can be applied to the whole.
