Research in Nursing, Midwifery and Allied Health: Evidence for Best Practice - Marilyn Richardson-Tench 2018-01-01

Research in Nursing, Midwifery and Allied Health provides students with the theory to understanding research frameworks in nursing and allied health. Using practical examples, this text applies the theory to practice in a number of updated cases that reflect students across the nursing, midwifery and allied health areas. The research framework introduced in the book has three different intersecting purposes: (i) to show students how to critically appraise existing research (ii) to show students how the results of research can be used in clinical practice to inform patient care (iii) to conduct their own research. The sixth edition includes more content than ever before linking research to evidence-based practice, helpfully sign posted throughout the text in new evidence-based practice boxes. Research in Nursing, Midwifery and Allied Health supports instructors as they guide new nursing researchers through the entire research process in a practical and easy to read step-by-step guide. The new four-colour design will be a welcome addition to Cengage's suite of Nursing texts, as well as new CourseMate Express website and Search Me! Nursing, giving students unique access to current journals and news articles specific to nursing and health research.

Foundations for Community Health Workers - Tim Berthold

Foundations for Community Health Workers Foundations for Community Health Workers is a training resource for client- and community-centered public health practitioners, with an emphasis on promoting health equality. Based on City College of San Francisco's CHW Certificate Program, it begins with an overview of the historic and political context informing the practice of community health workers. The second section of the book addresses core competencies for working with individual clients, such as behavior change counseling and case management, and practitioner development topics such as ethics, stress management, and conflict resolution. The book's final section covers skills for practice at the group and community levels, such as conducting health outreach and facilitating community organizing and advocacy. Praise for Foundations for Community Health Workers "This book is the first of its kind: a manual of core competencies and curricula for training community health workers. Covering topics from health inequalities to patient-centered counseling, this book is a tremendous resource for both scholars of and practitioners in the field of community-based medicine. It also marks a great step forward in any setting, rich or poor, in which it is imperative to reduce health disparities and promote genuine health and well-being." Paul E. Farmer, MD., PhD, Maude and Lillian Presley Professor of Social Medicine in the Department of Global Health and Social Medicine at Harvard Medical School; founding director, Partners In Health. "This book is based on the contributions of experienced CHWs and advocates of the field. I am confident that it will serve as an inspiration for many CHW training programs." Yvonne Lacey, CHW, former coordinator, Black Infant Health Program, City of Berkeley Health Department; former chair, CHW Special Interest Group for the APHA. "This book masterfully integrates the knowledge, skills, and abilities required of a CHW through storytelling and real life case examples. This simple and elegant approach brings to life the intricacies of the work and espouses the spirit of the role that is so critical to eliminating disparities a true model educational approach to emulate." Gayle Tang, MSN, RN., director, National Linguistic and Cultural Programs, National Diversity, Kaiser Permanente "Finally, we have a competency-based textbook for community health worker education well informed by seasoned CHWs themselves as well as expert contributors." Donald E. Proulx, CHW National Education Collaborative, University of Arizona

Applied Neuroscience for the Allied Health Professions E-Book - Douglas McBean 2012-08-11

This brand new resource provides a solid, comprehensive and accessible foundation in neurosciences for undergraduates and pre-registration postgraduate students. Using a multidisciplinary approach, it will guide students in their understanding of the most commonly found problems in neurological rehabilitation and inform their clinical practice. The book starts with the foundation of basic neurosciences, covering the normal function and structure of the nervous system from the organism as a whole through to the molecular level. It also introduces perceptuo-motor control and learning - topics that lie at the heart of rehabilitation. The book then goes on to discuss problems that allied health professionals commonly encounter in neurological rehabilitation. Topics covered include problems with perception and movement, planning, attention and memory, communication, motivation and emotion, sleep, continence and sexuality. The book also introduces key theories and evidence underpinning both behavioural and pharmacotherapeutic interventions used in neurological rehabilitation. The book closes by summarising current principles underpinning best practice and also looks to the future by identifying gaps in evidence-based practice with ideas for future research and what the future may hold for neurological rehabilitation. Throughout, a variety of supplementary information boxes point towards additional material such as Case Studies which highlight the clinical relevance of topics discussed; and a variety of Research Boxes which refer to more advanced material and/or original research studies. Each chapter ends with self-assessment questions which will check progress and prompt students to reflect on how the information presented in the chapter could be applied to clinical practice. Written by a multidisciplinary team, highly experienced in teaching, research and clinical practice Lays the foundation of basic neurosciences for allied health students Accessible and comprehensive text Introduces students to key theories and evidence underpinning neurological rehabilitation Focuses on clinically relevant information End of chapter self-assessment questions of different levels of complexity

Health Professions Education Institute of Medicine 2003-07-01

The Institute of Medicine study Crossing the Quality Chasm (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. Health Professions Education: A Bridge to Quality is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

The Future of Nursing - Institute of Medicine 2011-02-08

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Clinical Cases: Fundamentals of nursing case studies - Natasha Scully 2014-09-08

Perfect for: • Bachelor of Nursing Students • Diploma of Nursing

Students Apply theory to practice with the Clinical Cases textbook series! Get to know the fundamentals of nursing with this nursing textbook, which offers nursing students insightful case studies based on real-life situations that you are likely to encounter in a practical environment. Benefit from Scully and Wilson's Clinical Cases: Fundamentals of Nursing Case Studies nursing textbook, which has been written to assist with exam preparation and revision thanks to its collection of multiple choice questions and answers. Clinical Cases: Fundamentals of Nursing Case Studies is clearly structured to maximise your learning. Each case study begins with an introduction of the presenting condition and its symptoms. As the scenario develops, information concerning the patient's condition, tests and medications are provided. At the close of each case study, the patient outcomes are explored in addition to a discussion of the most significant considerations of the scenario. It is strongly recommended that nursing students enrolled in the Diploma and Bachelor Nursing courses use Fundamentals of Nursing Case Studies alongside Potter and Perry's Fundamentals of Nursing, 4th Edition by Jackie Crisp, Catherine Taylor and Geraldine Rebeiro. This enables you to maximise your learning and develop a very strong understanding of core nursing concepts. Other titles in this series: • Clinical Cases: Medical-Surgical Nursing Case Studies by Janine Bothe. • Clinical Cases: Nursing Care Case Studies by Margaret Webb and Ellie Kirov. A Call to Be Whole: The Fundamentals of Health Care Reform - Barbara J. Sowada 2003-07-30

Examines the complex interrelationships that inform the health care system. Health care, like all social systems, is a product of thought. Up to now, our collective thinking has been based on trying to manage parts, not the whole. This book inquires into four age-old questions that shape all health care systems: What is health? What is care? Who is responsible? How much is enough? Americans have the wealthiest health care system in the world, yet the health status of Americans ranks in the lowest quartile among the world's 25 industrialized nations and 45 million Americans are without health insurance. Today's cost, quality, and access problems are inter-related and can be traced to taken-for-granted assumptions and health care's outmoded organizing concepts: reductionism and materialism. Greater fragmentation of care, an over-dependence on technology, inattention to social and environmental determinants of health, and serious economic and moral dilemmas are some of the results of the last 40 years of piecemeal political and economic reform. This book has three purposes. The first is to help the reader see healthcare as a complex system—a part in a larger whole—and to show how answers to the questions, What is health? What is care? Who is responsible? How much is enough? implicitly define the purpose, effectiveness, efficiency, and fairness of a health care system. The second is to show that today's access, cost, and quality problems are interrelated, and arise from outmoded concepts, unquestioned assumptions, and a long trail of inconsistent and contradictory answers to the four questions. The third purpose is to acquaint readers with both the personal and societal challenges of finding coherent answers to the four questions raised above and to describe some of the budding experimental solutions that challenge traditional conventions and assumptions.
