Technology, Learning, and Innovation - Linsu Kim 2000-07-24

In this volume leading scholars analyze in a series of original essays and commentaries how newly industrializing countries (NICs), particularly those in East Asia, have transformed themselves from technologically backward and poor to relatively modern and affluent economies over the past thirty years. The contributors provide interesting theoretical perspectives and offer insights into the process of technological progress at both the macro and micro levels in these countries. The essays review how firms, particularly those in electronics and automobiles, have dynamically accumulated technological capabilities at the micro level, how public policies have shaped the process of technological progress at the national level, and what problems some of these countries face today at both levels. In addition, the volume provides a comparison of East Asian NICs with their Latin American counterparts. The discussion also offers useful lessons for policies in other developing countries.

Post-WTO economic effects on state-owned enterprises in China
Beiske 2003-10-21

Inhaltsangabe:Abstract: The importance of the World Trade Organisation (WTO) for international free trade today has enticed China to join the WTO in December 2001. The significance of WTO membership for China cannot be underestimated, inevitably speeding up much-needed economic reform in the country. The gradual transition from a planned- to a market-economy is expected to continue in the future. The severity of the impacts for the economy will depend on how successful China is in providing policies that will assist the nation in the major adjustment problems that it faces in the future. The expected, actual, and needed implications for China's state-owned enterprises (SOEs) resulting from WTO membership will be investigated in detail; in the process, the significance of SOEs to the Chinese economy will be highlighted. SOEs are mostly ill- prepared for a post-WTO China, and the dismal state of these companies has already led to the decline of market share in the past decade. For the future, the retreat of the state is likely to continue. The main implications for SOEs from China's WTO membership are seen

in the areas of competitiveness, corporate governance, privatisation, mergers and acquisitions, property rights, unemployment, and attracting and retaining qualified personnel. This dissertation offers one of the first detailed insights into the challenges facing China's SOEs today and the implications of China's WTO membership for these companies, while also highlighting the areas that require future attention. The understanding of the role and meaning of SOEs for the Chinese economy is of immense importance for foreign investors wanting to invest in the country, already cooperating with China's SOEs, or looking into the possibility of such.

Proofs and Computations - Helmut Schwichtenberg 2011-12-15

Driven by the question, 'What is the computational content of a (formal) proof?', this book studies fundamental interactions between proof theory and computability. It provides a unique self-contained text for advanced students and researchers in mathematical logic and computer science. Part I covers basic proof theory, computability and Gödel's theorems. Part II studies and classifies provable recursion in classical systems, from fragments of Peano arithmetic up to Π_1^1 -CA₀. Ordinal analysis and the (Schwichtenberg-Wainer) subrecursive hierarchies play a central role and are used in proving the 'modified finite Ramsey' and 'extended Kruskal' independence results for PA and Π_1^1 -CA₀. Part III develops the theoretical underpinnings of the first author's proof assistant MINLOG. Three chapters cover higher-type computability via information systems, a constructive theory TCF of computable functionals, realizability, Dialectica interpretation, computationally significant quantifiers and connectives and polytime complexity in a two-sorted, higher-type arithmetic with linear logic.

Understanding Chinese Firms from Multiple Perspectives - Zhi-Xue Zhang 2014-06-19

Previous analysis on the "Chinese Economic Miracle" mostly talks about macro-economy but neglects the study on the basic element of the Chinese Miracle - the enterprises. With China's economic rise, Chinese enterprises experienced a rapid process of adaptation, change and development, and also become strong competitors in the world market. This book sets forth the explorations and thoughts on Chinese enterprise management practices from both academic and practical perspective, extracts the management theory of Chinese characteristics, and represents the efforts to establish and develop Chinese organization and management.

Glow Discharge Optical Emission Spectrometry - Richard Payling 1997-12-08

Glow Discharge Optical Emission Spectrometry (GD-OES) is rapidly becoming one of the most important techniques for the direct analysis of solids. This, the first book entirely devoted to the subject, represents the combined contributions of over 30 specialists from around the world. All contributors are active in the field and recognised internationally for their expertise and knowledge in GD-OES. The book begins with an introductory overview of the subjects, deals with the design of the instrument, its operation and analytical methods and describes in detail the complex plasma processes which occur inside the glow discharge source. The second part of the book is more practically orientated, showing the full range of uses for GD-OES from the bulk analysis of

virtually any solid material to depth profiling within the first tens of micrometres of a variety of surfaces and coatings. Glow Discharge Optical Emission Spectrometry is intended for a wide audience of scientists, engineers and postgraduate students and will be a valuable and challenging reference work for both experienced users of the technique and newcomers alike.

Handbook of Food Process Design, 2 Volume Set - Jasim Ahmed
2012-05-21

In the 21st Century, processing food is no longer a simple or straightforward matter. Ongoing advances in manufacturing have placed new demands on the design and methodology of food processes. A highly interdisciplinary science, food process design draws upon the principles of chemical and mechanical engineering, microbiology, chemistry, nutrition and economics, and is of central importance to the food industry. Process design is the core of food engineering, and is concerned at its root with taking new concepts in food design and developing them through production and eventual consumption. Handbook of Food Process Design is a major new 2-volume work aimed at food engineers and the wider food industry. Comprising 46 original chapters written by a host of leading international food scientists, engineers, academics and systems specialists, the book has been developed to be the most comprehensive guide to food process design ever published. Starting from first principles, the book provides a complete account of food process designs, including heating and cooling, pasteurization, sterilization, refrigeration, drying, crystallization, extrusion, and separation. Mechanical operations including mixing, agitation, size reduction, extraction and leaching processes are fully documented. Novel process designs such as irradiation, high-pressure processing, ultrasound, ohmic heating and pulsed UV-light are also presented. Food packaging processes are considered, and chapters on food quality, safety and commercial imperatives portray the role process design in the broader context of food production and consumption.

Cybercrime and Digital Forensics Thomas J. Holt 2015-02-11

The emergence of the World Wide Web, smartphones, and Computer-Mediated Communications (CMCs) profoundly affect the way in which people interact online and offline. Individuals who engage in socially unacceptable or outright criminal acts increasingly utilize technology to connect with one another in ways that are not otherwise possible in the real world due to shame, social stigma, or risk of detection. As a consequence, there are now myriad opportunities for wrongdoing and abuse through technology. This book offers a comprehensive and integrative introduction to cybercrime. It is the first to connect the disparate literature on the various types of cybercrime, the investigation and detection of cybercrime and the role of digital information, and the wider role of technology as a facilitator for social relationships between deviants and criminals. It includes coverage of: key theoretical and methodological perspectives, computer hacking and digital piracy, economic crime and online fraud, pornography and online sex crime, cyber-bullying and cyber-stalking, cyber-terrorism and extremism, digital

forensic investigation and its legal context, cybercrime policy. This book includes lively and engaging features, such as discussion questions, boxed examples of unique events and key figures in offending, quotes from interviews with active offenders and a full glossary of terms. It is supplemented by a companion website that includes further students exercises and instructor resources. This text is essential reading for courses on cybercrime, cyber-deviancy, digital forensics, cybercrime investigation and the sociology of technology.
