Properties of Plastics - Thea B. van Oosten
2022-08-30

A practical, comprehensive resource on the complex behaviors of plastics written expressly for conservation and cultural heritage professionals. Almost every museum in the world is confronted with plastics in their collections. Research initiatives and knowledge concerning the conservation of heritage objects made of plastics have proliferated over the last twenty-five years, necessitating this up-to-date, comprehensive resource. Intended as a highly practical guide for the conservation community, this authoritative book offers information essential to understanding plastics, polymers, and rubber/elastomers and their behaviors in the cultural heritage context. Numerous graphs, diagrams, and illustrations allow readers to compare the mechanical, physical, thermal, and optical properties of these substances during conservation. Aimed at the hands-on museum practitioner, this book will assist professionals in choosing the appropriate methods and materials for preserving and treating plastic objects. Complementing the main chapters, fifty-six illustrated "fact sheets" summarize, at a glance, the properties of those plastics most commonly

found in museum collections. Six informative case studies present real-world examples of current conservation approaches to works of art and design made of plastics and rubber/elastomers. Under the expert authorship of Thea B. van Oosten, conservation scientist, educator, and internationally regarded authority on the behavior and properties of plastics, this instructive volume is destined to become an invaluable resource for the field.

Rubber Injection Moulding - J. A. Lindsay 2000

This review has been written as a practical guide to rubber injection moulding. Many injection moulding processes produce rejects or scrap, because they depend on a host of variables. To eliminate waste it is necessary to learn how to recognise the variables that cause problems, and then experiment to understand their interdependence. This can be developed to a fine art and lead towards 'right first time' processing,

the commercial ideal. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database gives useful references for further reading.

Lotus and Feather Ji-li Jiang 2016-12-13

Nucleating Agents - Stuart Fairgrieve 2007-11
A very important factor in obtaining optimised physical properties from a semi-crystalline polymer is the size of the crystalline structures

present in the material, and this crucially depends on the initiation process of crystallisation of the polymer from the melt - nucleation. This review provides information on the development of materials and methods for influencing the nucleation of polymer crystallisation in commercial processing by means of addition of low levels of adjuvants specifically selected for this purpose.

Polymer Processing with Supercritical Fluids - Vanessa Goodship 2005

SCFs are currently the subjects of intense research and commercial interest. Applications such as the RESS (rapid expansion of supercritical fluid solutions) process are part of standard industrial practice. In view of their ever-growing importance in the polymer industry there is a need to fully comprehend how supercritical fluids interrelate with polymeric materials to realise the potential that can be gained from their use. The authors review the basic principles of SCFs and their application within the polymer industry: characteristics and properties, extraction of unwanted residual products, polymerisation solvents, and polymer impregnation. Processing applications such as plasticisation, foaming and blending are also considered. There is discussion of the potential within the polymer recycling industry for use of SCFs as cleaning agents or within supercritical oxidation processes. Fluoroplastics - Jiri Drobny 2006

Fluoropolymers were discovered accidentally by Plunkett in 1938. He was working on freon and accidentally polymerised tetrafluoroethylene. The result was polytetrafluoroethylene (PTFE), more commonly known as Teflon. PTFE is inert to virtually all chemicals and is considered to be the most slippery material in existence - it has the lowest coefficient of friction of any known solid material. These properties have made it one of the most valuable and versatile technologies ever invented, contributing to significant advancements in areas such as

aerospace, communications, electronics, industrial.

Adhesion to Fluoropolymers - Derek Brewis 2006**Design** - 1987-07**The Missing Alphabet** Susan Marcus 2012-10-23

The future will belong to children with innovative minds. Which is why this team of education experts have drawn on their decades of applied research in creativity, individuality, play, and media to craft an engaging guide for

parents who understand that creative thinking skills are no longer a luxury, but a necessity for success in the new, grown-up world of work. The book introduces the Sensory Alphabet, basic building blocks that are as powerful for building twenty-first-century literacies as the ABCs are for reading—and that are lacking in schools today. The Missing Alphabet also offers foundational knowledge, current research and a pragmatic path for parents to understand the individual strengths and creative potential that will help their own children learn productively in the future. To turn these ideas into action, there is a Field Guide full of resources and activities for parents and kids to explore together at home, in museums, and around the neighborhood. This tried-and-true approach engages children with the creative thinking process, the capacity to invent with many media, the ability to think across disciplines, and the reliance on (and joy in) the imagination. Over the past forty years, the authors have developed highly successful programs for both in and out-of-school settings based on these concepts. Now, they offer parents a comprehensive guide for building the confidence and creative thinking skills for their own children—and now urgently needed for our collective future.
