The Diabetes Reset - George King 2015-01-13

Imagine controlling—avoiding—reversing!—the “health hazard of the 21st century” (World Health Organization), the disease that afflicts nearly 26 million Americans and is an imminent threat to an additional 80 million adults and children. That’s exactly the promise of *The Diabetes Reset* by Dr. George King, research director and chief science officer at Harvard’s Joslin Diabetes Center, the world’s largest and most respected diabetes research center, synonymous with revolutionizing the diagnosis, treatment, and prevention of diabetes. Based on the most cutting-edge research—including the groundbreaking discovery of brown fat in adults and its role in burning calories and enhancing the effects of the body’s own insulin—*The Diabetes Reset* translates the latest findings into a plan that will let readers avoid, control, and even reverse type 2 diabetes. The program begins with losing weight—and shows why losing only 5% of body weight makes a life-changing difference. It explains how a good’s night sleep can significantly lower blood glucose levels (and why sleep deprivation works in reverse). It disentangles the carbohydrate confusion, reveals how to decrease the body’s inflammatory response, and explains the importance of moderate exercise. There are eight strategies in all—if you implement only one, your type 2 diabetes will improve. Pursue all eight of them, and you can stop type 2 diabetes in its tracks. You can even reverse it—effectively resetting your body’s glucose metabolism for a long, healthy life.

Reversi ng Di abet es Don Colbert 2012-03-06

It is possible to manage and even reverse diabetes through natural means, and in *Reversing Diabetes*, Dr. Colbert shows you how. Most

people view diabetes as a dead-end street. Once you receive a diabetes diagnosis, your only option is to manage the symptoms with a restricted diet, close monitoring of blood sugar, and expensive medications. Dr. Colbert shows that diabetes can be treated instead through safe, natural means, like healthy food and vitamins rather than strictly relying on prescription drugs. He shows you how to manage your weight and your glucose intake with a whole-body approach, using nutritional supplements along with dietary and lifestyle changes to lose weight, repair cell damage, improve insulin function, and reduce the side effects from prescription drugs, many of which rob nutrients from the body and cause additional symptoms. Based on the same life-changing principles of the low-glycemic, high-fiber eating plan provided in Dr. Colbert's New York Times best-selling book, Dr. Colbert's "I Can Do This" Diet, this book adapts that plan in a way that makes it ideal for diabetics who need to manage their glucose levels and their weight. "Siloam, an imprint of Charisma House Book Group, is the leader in the Christian health and fitness genre, with several best-sellers...including Don Colbert's The Bible Cure series." --Christian Retailing "Physician Don Colbert Preaches The Gospel Of Good Nutrition, Advising His Patients To Follow In The Footsteps Of One Of History's Better-known Role Models." --Orlando Sentinel

Life Without Diabetes - Roy Taylor 2020-03-17

THE US EDITION OF THE INTERNATIONAL BESTSELLER A momentous medical breakthrough—a scientifically proven program for managing and reversing Type 2 Diabetes at any stage of health. The fastest growing disease in the world, Type 2 diabetes has long been regarded as an incurable, lifelong condition that becomes progressively worse over time, resulting in pain, loss of vision, amputation, and even premature death. But there is hope. For more than four decades, Dr. Roy Taylor has been studying the causes of diabetes. In 2017, he had a breakthrough: he found scientific proof that Type 2 diabetes is not only reversible, but that anyone following a simple regimen can prevent and cure it. Dr. Taylor's research shows that Type 2 diabetes is caused by too much fat in the liver and pancreas, which interferes with both organs' normal functioning. By losing less than 1 gram of fat, the liver and organ can begin to perform as they were designed to once again—thus beginning the reversal process. The most efficient way to shed fat from the liver and pancreas is to lose weight as quickly as possible. Life Without Diabetes makes it easy for people to cut back on their daily calorie intake and avoid the two big problems of dieting—hunger and choice—and lose up to 35 pounds in just eight weeks. Thanks to Dr. Taylor, we can now fundamentally change how we treat and prevent this debilitating and all-too-common disease forever.

Healthy at Last Eric Adams 2020-10-13

New York mayor Eric Adams is on a mission to tackle one of the most stubborn health problems in the country: chronic disease in the African American community. African Americans are heavier and sicker than any other group in the U.S., with nearly half of all Black adults suffering from some form of cardiovascular disease. After Adams woke up with severe vision loss one day in 2016, he learned that he was one of the nearly 5 million Black people living with diabetes-and, according to his doctor, he would have it for the rest of his life. A police officer for more than two decades, Adams was a connoisseur of the fast-food dollar menu. Like so many Americans with stressful jobs, the last thing he wanted to think about was eating healthfully. Fast food was easy, cheap, and comfortable. His diet followed him from the squad car to the state senate, and then to Brooklyn Borough Hall, where it finally caught up with him. But Adams was not ready to become a statistic. There was a better option besides medication and shots of insulin: food. Within three months of adopting a plant-based diet, he lost 35 pounds, lowered his cholesterol by 30 points, restored his vision, and reversed his diabetes. Now he is on a mission to revolutionize the health of not just the borough of Brooklyn, but of African Americans across the country. Armed with the hard science and real-life stories of those who have transformed their bodies by changing their diet, Adams shares the key steps for a healthy, active life. With this book, he shows readers how to avoid processed foods, cut down on salt, get more fiber, and substitute beef, chicken, pork, and dairy with delicious plant-based alternatives. In the process he explores the origins of soul food-a cuisine deeply important to the Black community, but also one rooted in the horrors of slavery-and how it can be reimagined with healthy alternatives. Features more than 50 recipes from celebrities and health experts, including Paul McCartney, Queen Afua, Jenné Claiborne, Bryant Jennings, Charity Morgan, Moby, and more! The journey to good health begins in the kitchen-not the hospital bed!

Reverse Your Diabetes in 12 Weeks George King 2016-10-21

A groundbreaking program to avoid, control, and even reverse diabetes

through diet and exercise. The research of Dr. George King, chief scientific officer of Harvard Medical School's Joslin Diabetes Center, is widely recognized in the medical community as the gold standard. In *Reverse Your Diabetes in 12 Weeks* (previously published in hardcover as *The Diabetes Reset*), Dr. King transforms the center's cutting-edge research—including the discovery of brown fat and how it enhances the effects of the body's own insulin—into a program of eight proven strategies. Foremost is diet—but the real surprise is that the diet that actually works, a modified “rural Asian diet,” derives 70% of its calories from carbohydrates. Dr. King disentangles the myths and confusion surrounding carbohydrates, fats, protein, and fiber, and shows why not all carbs are bad and why sugar is not the root of all evil. Losing weight is also key, but in a very doable way—significant changes happen with a 5 to 7% reduction of body weight. He emphasizes the importance of exercise—it increases the muscles' glucose-absorbing ability—and gives an easy-to-follow program of aerobic and strength exercises. And he shows why diabetics especially need those seven hours of sleep a night—chronic lack of sleep causes insulin resistance. A twelve-week plan shows how to put all of it into action—to take charge of blood glucose levels and significantly improve your health.

2-Day Diabetes Diet - Erin Palinski 2013-12-26

Diet just 2 days a week to drop the pounds and dodge type 2 diabetes! In a recent study, researchers in the UK found that restricting carbohydrates just two days per week was superior to a standard, daily calorie-restricted diet for both reducing weight (about 9 pounds lost vs 5 pounds) and lowering insulin levels (reduced by 22% vs 4 %). Based on this and other research indicating that safe weight loss is the key to reversing and preventing diabetes, Reader's Digest has partnered with registered dietitian and diabetes expert Erin Palinski to distill the latest science to create an easy-to-follow plan that allows people with diabetes to have their cake—and other carbs—and still keep their blood sugar under control. A diagnosis of diabetes can be overwhelming and frightening, and even many of those who have lived with diabetes for years often struggle with the question of what they can eat. The 2-Day

Diabetes Diet makes it simple—there are no forbidden foods and no carb-counting. You just need to restrict what you eat for 2 days a week—and research suggests you will see the pounds drop off, your blood sugar levels stabilize, and your waist shrink. On those 2 days a week, you follow the low-carb “Power Burn” program, and consume approximately 600 calories of selected foods. What does that look like on your plate? How about a 2-egg omelet with onions and peppers plus yogurt for breakfast; a hearty bowl of carrot soup plus fresh fruit for lunch; meatloaf and broccoli for dinner with milk; and a cup of sweet grapes for a snack? Or Canadian bacon and spinach for breakfast with a cup of milk; vegetable soup and half a banana topped with peanut butter for lunch; grilled chicken and zucchini over pasta for dinner; and an orange with a cup of milk for a snack. With real delicious food filling your tummy, you won't believe it all adds up to only about 600 calories. For the rest of the week, you follow a delicious 1500-calorie-a-day Mediterranean-style eating plan—we call these “Nourishment” days. You can enjoy a bounty of brightly colored fruits and vegetables, lean proteins, whole grains, and even a few treats. The book will include: A 2-week day-by-day meal plan that lays out sample Power Burn and Nourishment days More than 60 meal options, including restaurant and frozen food options, so you can customize the menus to your taste and lifestyle More than 50 delicious diabetes-friendly recipes An optional easy walking and strength-training program to boost results even more Stress-reducing exercises to help you ward off cravings and reduce hunger Success stories from the 10 men and women who tried the plan with amazing results! The plan is designed to be flexible—you can do your Power Burn days whenever works for you, and you can personalize almost any meal to suit your tastes—and will work for both people with type 2 diabetes and those at risk.

Diabetes : the Real Cause and the Right Cure : 8 Steps to Reverse Your Diabetes in 8 Weeks - John M. Poothullil 2017

Type 2 patients! Reverse your diabetes. Gain control of your eating habits! If you have Type 2 diabetes, whether recently diagnosed or ongoing for years, this book will open your eyes to a new type of thinking

about the real cause of your diabetes and the right cure that will reverse it. After reading this book, whatever you thought about diabetes will change. If you think that diabetes is your destiny because one or both of your parents had it, you will learn that what you have inherited is only a potential. If you think Type 2 diabetes cannot be "cured," this book will show a completely different picture. The fact is, you can reverse high blood sugar and diabetes in as little as 8 weeks using the 8 steps in this book. Diabetes affects more than 23 million people in the US. Most diabetics are treated with medications or insulin injections to "control" their diabetes, yet they still develop the complications of the condition. Diabetes is considered to be the 3rd leading cause of death in the US. 1 in every 4 adults over age 65 has diabetes. "The health professionals have failed to teach people about the true nature of diabetes," says Dr. John Poothullil. "This is now a national epidemic that is dangerous and costly. Although there is awareness about diabetes, people are unaware that it is truly preventable and reversible by a simple change in diet." From his research, Dr. John can show that diabetes is caused by the consumption of grains - including wheat, barley, rice, oats, corn, and the many products made with the flour of these grains. When people excessively consume grains, it fills their fat cells and eventually forces a normal body metabolism to go haywire, leaving glucose in the bloodstream. This causes high blood sugar-and when that continues for a long period of time, it results in diabetes. "This analysis of diabetes makes far more sense than insulin resistance. It explains why diabetes is spreading in countries like China, India, England, and the US where grain is a major portion of the diet. It explains why younger and younger adults, even teenagers, are developing diabetes, given their diets of pizza, sandwiches, snack foods, cakes, muffins, doughnuts and so many products that contain grains. It also explains why some pregnant women get gestational diabetes and shed it within days after giving birth," Dr. John states. Recognizing the link between grains and high blood sugar is the key to preventing and reversing diabetes. This is Dr. John's second book. The first, *Eat Chew Live: 4 Revolutionary Ideas to Prevent Diabetes, Lose Weight & Enjoy Food*, on preventing diabetes,

maintaining body weight and enjoying food intake was published in 2015. *Diabetes-The Real Cause and The Right Cure* is focused on reversing diabetes for those who already have it.

Global Report on Diabetes - World Health Organization 2016-05-31

"Diabetes is a serious, chronic disease that occurs either when the pancreas does not produce enough insulin (a hormone that regulates blood sugar, or glucose), or when the body cannot effectively use the insulin it produces. Diabetes is an important public health problem, one of four priority noncommunicable diseases (NCDs) targeted for action by world leaders. Both the number of cases and the prevalence of diabetes

have been steadily increasing over the past few decades. Globally, an estimated 422 million adults were living with diabetes in 2014, compared to 108 million in 1980. The global prevalence (age-standardized) of diabetes has nearly doubled since 1980, rising from 4.7% to 8.5% in the adult population. This reflects an increase in associated risk factors such as being overweight or obese. Over the past decade, diabetes prevalence has risen faster in low- and middle-income countries than in high-income countries. Diabetes caused 1.5 million deaths in 2012. Higher-than-optimal blood glucose caused an additional 2.2 million deaths, by increasing the risks of cardiovascular and other diseases. Forty-three percent of these 3.7 million deaths occur before the age of 70 years. The percentage of deaths attributable to high blood glucose or diabetes that occurs prior to age 70 is higher in low- and middle-income countries than in high-income countries. Because sophisticated laboratory tests are usually required to distinguish between type 1 diabetes (which requires insulin injections for survival) and type 2 diabetes (where the body cannot properly use the insulin it produces), separate global estimates of diabetes prevalence for type 1 and type 2 do not exist. The majority of people with diabetes are affected by type 2 diabetes. This used to occur nearly entirely among adults, but now occurs in children too."--Page 6.

As a family physician for over 30 years and #1 New York Times bestselling author Joel Fuhrman, M.D. will tell you that doctors and medications cannot grant you excellent health or protection from disease and suffering. The most effective health-care is proper self-care and that starts with changing the way we eat. Eat for Life delivers a science-backed nutrition-based program that prevents and even reverses most medical problems within three to six months. This is a bold claim but the science and the tens of thousands who have tried this approach back it up. The truth is: you simply do not have to be sick. Most Americans are deficient in the vitamins, minerals and phytonutrients found in plants (micronutrients), and consume too many fats, proteins, carbohydrates (macronutrients). The results of this standard diet is that we are not only shortening our lives but damaging our energy, vitality, and daily health by eating packaged and processed foods, excessive meat and dairy, and unsustainable amounts of salt and sugar. What we need is to consume foods rich in phytonutrients such as greens, beans, onions, mushrooms, berries, and seeds. These delicious and abundant foods contain the largest assortment of micronutrients and when consumed in adequate quantities they prevent and reverse diabetes and heart-disease, lower cholesterol and blood pressure, and reduce hunger and food cravings. Mist er i ng Di abet es Cyrus Khambatta, PhD 2020-02-18

The instant New York Times bestseller. A groundbreaking method to

master all types of diabetes by reversing insulin resistance. Current medical wisdom advises that anyone suffering from diabetes or prediabetes should eat a low-carbohydrate, high-fat diet. But in this revolutionary book, Cyrus Khambatta, PhD, and Robby Barbaro, MPH, rely on a century of research to show that advice is misguided. As the creators of the extraordinary and effective Mastering Diabetes Method, Khambatta and Barbaro lay out a step-by-step plan proven to reverse insulin resistance—the root cause of blood glucose variability—while improving overall health and maximizing life expectancy. Redesigning the Process for Establishing the Dietary Guidelines for Americans - National Academies of Sciences, Engineering, and Medicine 2017-12-16

What foods should Americans eat to promote their health, and in what amounts? What is the scientific evidence that supports specific recommendations for dietary intake to reduce the risk of multifactorial

chronic disease? These questions are critically important because dietary intake has been recognized to have a role as a key determinant of health. As the primary federal source of consistent, evidence-based information on dietary practices for optimal nutrition, the Dietary Guidelines for Americans (DGA) have the promise to empower Americans to make informed decisions about what and how much they eat to improve health and reduce the risk of chronic disease. The adoption and widespread translation of the DGA requires that they be universally viewed as valid, evidence-based, and free of bias and conflicts of interest to the extent possible. However, this has not routinely been the case. A first short report meant to inform the 2020 review cycle explored how the advisory committee selection process can be improved to provide more transparency, eliminate bias, and include committee members with a range of viewpoints. This second and final report recommends changes to the DGA process to reduce and manage sources of bias and conflicts of interest, improve timely opportunities for engagement by all interested parties, enhance transparency, and strengthen the science base of the process.
