Teens, Digital Media, and the Chicago Public Library - Penny Bender Sebring 2013-05-15 As new initiatives to exploit technology and digital media for learning sweep the country, a learning center for teens at the Harold Washington Library in downtown Chicago demonstrates both the challenges and opportunities that these efforts present, a new report from the University of Chicago Consortium on Chicago School Research finds. YOUmedia attracts between 350 and 500 teens weekly, the report finds. The largest single demographic group attending YOUmedia is African American males, who historically have been underserved by after-school programs. With the guidance of adults and collaboration with peers, participants discover and pursue

their interests through activities such as blogging, writing and sharing poetry, playing and reviewing electronic games, producing music and videos, and participating in book clubs. Key findings from the report include: - YOUmedia is cultivating a budding sense of community among teens who participate. This sense of community, along with peer relationships, serves as a potent force for driving teens to engage in digital media in new ways. The vast majority of teens say that at YOUmedia it is "cool to be excited about your interests" and that they have met peers and mentors that share their interests. -A majority of YOUmedia participants report that they have improved their digital media skills due to YOUmedia. -The majority of teens also report that YOUmedia has helped them with their school work and better understand opportunities available to them after high school. -Staff members at YOUmedia have at times struggled to balance the imperative to let teens choose their own activities in the space with the desire to engage students in more structured learning activities. -Participation at YOUmedia differs substantially from teen to teen. While about 22 percent of teens regularly create original work, 28 percent use the computers to do their homework. A little over 30 percent use a variety of media, including video games, keyboards, and podcasts; and 18 percent primarily socialize and attend open mic sessions performed by other teens."

Proceedings of the 2011 2nd International Congress on Computer Applications and Computational Science - Ford Lumban Gaol
2012-02-23

The latest inventions in computer technology influence most of human daily activities. In the near future, there is tendency that all of aspect of human life will be dependent on computer applications. In manufacturing, robotics and automation have become vital for high quality products. In education, the model of teaching and learning is focusing more on electronic media than traditional ones. Issues related to energy savings and environment is becoming critical. Computational Science should enhance the quality of human life, not only solve their problems. Computational Science should help humans to make wise decisions by presenting choices and their possible consequences. Computational Science should help us make sense of observations, understand natural language, plan and reason with extensive background knowledge. Intelligence with wisdom is perhaps an ultimate goal for human-oriented science. This book is a compilation of some recent research findings in computer application and computational science. This book provides state-of-the-art accounts in Computer Control and Robotics, Computers in Education and Learning Technologies, Computer Networks and Data Communications, Data Mining and Data Engineering, Energy and Power Systems, Intelligent Systems and Autonomous Agents, Internet and Web Systems, Scientific Computing and Modeling, Signal, Image and Multimedia Processing, and Software Engineering.

Psychology: Core Concepts, 7/e provides rich coverage of the foundational topics taught for introductory psychology. Each major section of every chapter is organized around a single concept, called a Core Concept. The Core Concepts allow readers to draw connections across the chapter and see the big picture of psychology. Learning is then reinforced through focused application and critical thinking activities. The 7th edition features an enhanced critical thinking emphasis, with new chapter-opening "Problems" and new end-of-chapter critical thinking applications that promote active learning. MyPsychLab is an integral part of the Zimbardo / Johnson / McCann Hamilton program. Engaging activities and assessments provide a teaching and learning system that helps students think critically. With MyPsychLab, students can watch videos on psychological research and applications, participate in virtual classic experiments, and develop critical thinking skills through writing. Psychology: Core Concepts, 7/e is available in a new DSM-5 Updated Edition. To learn more, click here. This title is available in a variety of formats - digital and print. Pearson offers its titles on the devices students love through Pearson's MyLab products, CourseSmart, Amazon, and more.

Principles of Program Design: Problem-Solving with JavaScript - Paul Addison
2012-07-25

From the respected instructor and author Paul

Addison, **PRINCIPLES OF PROGRAM DESIGN: PROBLEM SOLVING WITH JAVASCRIPT** gives your students the fundamental concepts of good program design, illustrated and reinforced by hands-on examples using JavaScript. Why JavaScript? It simply illustrates the programming concepts explained in the book, requires no special editor or compiler, and runs in any browser. Little or no experience is needed because the emphasis is on learning by doing. There are examples of coding exercises throughout every chapter, varying in length and representing simple to complex problems. Students are encouraged to think in terms of the logical steps needed to solve a problem and can take these skills with them to any programming language in the future. To help reinforce concepts for your students, each chapter has a chapter summary, review questions, hand-on activities, and a running case study that students build on in each chapter. The Mathematics Teacher in the Digital-Era
Alison Clark-Wilson 2013-12-08

This volume addresses the key issue of the initial education and lifelong professional learning of teachers of mathematics to enable them to realize the affordances of educational technology for mathematics. With invited contributions from leading scholars in the field, this volume contains a blend of research articles and descriptive texts. In the opening chapter John Mason invites the reader to engage in a number of mathematics tasks that highlight important features of technology-mediated mathematical activity. This is followed by three main sections: An overview of current practices in teachers' use of digital technologies in the classroom and explorations of the possibilities

for developing more effective practices drawing on a range of research perspectives (including grounded theory, enactivism and Valsiner's zone theory). A set of chapters that share many common constructs (such as instrumental orchestration, instrumental distance and double instrumental genesis) and research settings that have emerged from the French research community, but have also been taken up by other colleagues. Meta-level considerations of research in the domain by contrasting different approaches and proposing connecting or uniting elements
