[The Geography of Mobility, Wellbeing and Development in China](#) - Wenjie Wu 2020-02-25

Big data is increasingly regarded as a new approach for understanding urban informatics and complex systems. Today, there is unprecedented data availability, with detailed remote-sensed data on the built environment and rich mineable web-based sources in the form of social media, web mapping, information services and other sources of unstructured "big data". This book brings together a group of international contributors to consider the geographical implications of mobility, wellbeing and development within and across Chinese cities through location-based big data perspectives. The degree of urban sprawl, productive density and vibrancy can be reflected from location-based social media big data. The challenge is to identify, map and model these relationships to develop cities at different places in the urban hierarchical system that are more sustainable. This edited book aims to tackle these issues through two inter-related geographical scales: inter-city level and intra-city level. The text is designed for graduate courses in planning, geography, public policy and administration, and for international researchers who are involved in urban and regional economics and economic geography.

[The Knowledge Gap](#) - Natalie Wexler 2020-08-04

The untold story of the root cause of America's education crisis--and the seemingly endless cycle of multigenerational poverty. It was only after years within the education reform movement that Natalie Wexler stumbled across a hidden explanation for our country's frustrating lack of progress when it comes to providing every child with a quality education. The problem wasn't one of the usual scapegoats: lazy teachers, shoddy facilities, lack of accountability. It was something no one was talking about: the elementary school curriculum's intense focus on decontextualized reading comprehension "skills" at the expense of actual knowledge. In the tradition of Dale Russakoff's *The Prize* and Dana Goldstein's *The Teacher Wars*, Wexler brings together history, research, and compelling characters to pull back the curtain on this fundamental flaw in our education system--one that fellow reformers, journalists, and policymakers have long overlooked, and of which the general public, including many parents, remains unaware. But *The Knowledge Gap* isn't just a story of what schools have gotten so wrong--it also follows innovative educators who are in the process of shedding their deeply ingrained habits, and describes the rewards that have come along: students who are not only excited to learn but are also acquiring the knowledge and vocabulary that will enable them to succeed. If we truly want to fix our education system and unlock the potential of our neediest children, we have no choice but to pay attention.

**Social cohesion in Gauteng** - Richard Ballard 2019-03-14

Increasing attacks on foreigners, including in April 2015, along with a succession of widely publicised incidents of racism, have triggered a new round of soul-searching in South Africa. Why, after the comprehensive defeat of apartheid and its ideology, does prejudice seem so intractable? What kinds of interventions could help reduce these troubling events? How can society be made more 'cohesive'? Suggestions about what to do in the face of these challenges are sometimes speculative and wishful. They consist of appeals to the better nature of ordinary people, or an assumption that the feel good moments of the democratic transition can be re-enacted to bind everyone together. Calls for social cohesion and tolerance seem often to dodge the complex vicious cycles that lead to the instances of intolerance that erupt in the media or in communities. This Research Report centres on better understanding the current dynamics of social cohesion in Gauteng. It tackles five guiding questions, each of which corresponds to a chapter: 1. How has social cohesion become a goal in post-apartheid South Africa, and what are the key limitations resulting from this understanding of social progress? 2. In a global context, how is social cohesion defined and what are the main contestations about this ideal of social change? 3. How do the respondents in the GCRO's Quality of Life IV (2015/16) survey respond to questions on levels of trust, claims to belonging by different race groups, and the place of migrants and gays and lesbians in Gauteng? 4. How have past and present initiatives to improve social cohesion conceived of the problem they are attempting to address, and what is their scale of intervention? 5. What are the various methodologies that have been used in past and present initiatives to improve social cohesion? A key premise of this research was that our society has an enormous accumulation of experience in trying to tackle anti-social interactions and to address social injustices that are, in various ways, shaped by race, class, nationality, gender, sexuality and other identities. The last two chapters of this report are based on a review of more than 60 social cohesion initiatives. They analyse the wide variety of actors involved in such work, the different ways in which they conceive of their objectives, and the different scales at which they operate. These actors pursue dozens of different methodologies including sports and dialogue, arts, psychology, urban design, and public campaigns. This dispersed capacity through society is important because it represents experience-based responses to the ways in which anti-social behaviour and social injustice are reproduced. In attempting to determine a programme of action, we argue that we should learn from and extend existing and past attempts to tackle these difficulties.

[Rule Britannia](#) - Danny Dorling 2019-01-15

Things fall apart when empires crumble. This time, we think, things will be different. They are not. This time, we are told, we will become great again. We will not. In this new edition of the hugely successful *Rule Britannia*, Danny Dorling and Sally Tomlinson argue that the vote to leave the EU was the last gasp of the old empire working its way out of the British psyche. Fuelled by a misplaced nostalgia, the result was driven by a lack of knowledge of Britain's imperial history, by a profound anxiety about Britain's status today, and by a deeply unrealistic vision of our future.

Landscape Modelling and Decision Support - Wilfried Mirschel  
2020-03-02

This book contributes to a deeper understanding of landscape and regional modelling in general, and its broad range of facets with respect to various landscape parameters. It presents model approaches for a number of ecological and socio-economic landscape indicators, and also describes spatial decision support systems (DSS), frameworks, and model-based tools, which are prerequisites for deriving sustainable decision and solution strategies for the protection of comprehensively functioning landscapes. While it mainly focuses on the latest research findings in regional modelling and DSS in Europe, it also highlights the work of scientists from Russia. The book is intended for landscape modellers, scientists from various fields of landscape research, university teaching staff, and experts in landscape planning and management, landscape conservation and landscape policy.

**Modern Approaches to the Visualization of Landscapes** - Dennis Edler  
2021-01-31

The volume deals with the effects of digitization on spatial and especially landscape construction processes and their visualization. A focus lies on the generation mechanisms of 'landscapes' with digital tools of cartography and geomatics, including possibilities to model and visualize non-visual stimuli, but also spatial-temporal changes of physical space. Another focus is on how virtual spaces have already become part of the social and individual construction of landscape. Potentials of combining modern media of spatial visualization and (constructivist) landscape research are discussed.

US Infrastructure - Aman Khan 2019-09-17

This book presents an in-depth look at US infrastructure and its challenges in the 21st century. While infrastructure has received considerable attention in recent years, much of the discussion has concentrated on physical, economic, or noneconomic conditions. The Trump administration has heightened interest in the topic, promising infrastructure spending during his tenure, yet little demonstrable progress has been made. This book brings together a multi-disciplinary perspective—structural, technological, economic, financial, political, planning, and policy—that has been largely absent in discussions on the subject, to provide a clearer and broader understanding of the challenges facing US infrastructure. The book is divided into three parts: Part I looks at the challenges from a structural, technological, and sustainability perspective; Part II from an economic, productivity, and finance perspective; and Part III from an institutional, security, and political perspective. Written primarily for policy makers, managers, and administrators in public and private organizations, as well as individuals and academics with an interest in the future of US infrastructure, this book provides an in-depth analysis of the US infrastructure problem, its causes and consequences, and suggests timely, specific measures that may be taken at the state, local, and federal levels to improve and better secure our roads, transit, public buildings, economy, and technology.

Learning Progressions in Geography Education - Osvaldo Muñiz Solari  
2016-07-30

This book informs an international audience of teachers, scholars and policymakers about the development of learning progressions for primary and secondary geography education in various countries and regions of the world. The book represents an important contribution to learning progressions research and practice. The different chapters explore how curriculum standards and frameworks in different countries portray progress and sophistication in the learning of geography. The

book compares educational systems and how teachers and curriculum developers use the concept of “learning progression” to guide educational practices. As an approach to educational research, learning progressions offer considerable potential for understanding how children develop understanding of geographic concepts and practices across grade bands and in relation to national geography standards. The book analyzes the general conditions of learning progressions within the context of a globalized world. Important themes are addressed such as: knowledge acquisition in formal education; measuring learning progressions in informal settings; learning progressions for one curriculum standard or several standards; conditions to assess progression in the learning of facts, concepts, and skills; and multiple pathways for understanding or learning geography. The contributing authors are experienced scientists in the field from all around the world giving specific insights into the practices of their countries. The book appeals to K-12 teachers, school administrators, policymakers, researchers in geography education, professors and lecturers at universities around the world.

**Connecting Disciplinary Literacy and Digital Storytelling in K-12 Education** - Haas, Leslie 2021-01-15

The idea of storytelling goes beyond the borders of language, culture, or traditional education, and has historically been a tie that bonds families, communities, and nations. Digital storytelling offers opportunities for authentic academic and non-academic literacy learning across a multitude of genres. It is easily accessible to most members of society and has the potential to transform the boundaries of traditional education. As concepts around traditional literacy education evolve and become more culturally and linguistically relevant and responsive, the connections between digital storytelling and disciplinary literacy warrant considered exploration. *Connecting Disciplinary Literacy and Digital Storytelling in K-12 Education* develops a conceptual framework around pedagogical connections to digital storytelling within K-12 disciplinary literacy practices. This essential reference book supports student success through the integration of digital storytelling across content areas and grade levels. Covering topics that include immersive storytelling, multiliteracies, social justice, and pedagogical storytelling, it is intended for stakeholders interested in innovative K-12 disciplinary literacy skill development, research, and practices including but not limited to curriculum directors, education faculty, educational researchers, instructional facilitators, literacy professionals, teachers, pre-service teachers, professional development coordinators, teacher preparation programs, and students.

**A Question of Commitment** - Thomas Waddock 2020-04-09

With the adoption of the United Nations Convention on the Rights of the Child (1989), commentators began to situate the evolution of the status of children within the context of the “property to persons” trajectory that other human rights stories had followed. In the first edition of *A Question of Commitment*, editors R. Brian Howe and Katherine Covell provided a template of analysis for understanding this evolution. They identified three overlapping stages of development as children transitioned from being regarded as objects to subjects in their own right: social laissez-faire, paternalistic protection, and children’s rights. In the social laissez-faire stage, children are regarded as objects, and largely as the property of parents. In the paternalistic protection stage, children are seen as vulnerable and in need of protection. The children’s rights stage lays emphasis on children as rights-bearers, as individuals in their own right with entitlements. In this second edition, new essays assess the extent to which children’s rights have been incorporated into their respective areas of policy and law. The authors draw conclusions about what the situation reveals about the status of children in Canada. Overall, many challenges remain on the pathway to full recognition and citizenship.

**Social Studies Education in South and South East Asian Contexts -** Kerry J Kennedy 2021-07-23

The education of young people is context bound. This edited volume explores the contexts that characterise South and South East Asia and their influence on social studies education. There is not a single context across this broad geographical expanse, rather different religions, different political systems and different values exert influences that create distinctive programmes that characterise different countries. Yet there are also commonalities such as the post-colonial nature of most of the countries portrayed in this book, determined efforts at establishing new national communities and multiple value systems that lead to distinctive local priorities. There are also voices of resistance in these chapters, recognising the realities of local contexts but also recognising the need for change. Social studies education in these contexts may well be descended from its origins in North America, but in South and South Asian contexts, it has taken on new purposes, new forms and new values. Education researchers, policymakers and postgraduate students in comparative education will find the volume useful in its exploration and comparison of the social studies curricular and reforms that shaped them.

**Assessment in Geographical Education** - Theresa Bourke 2022

In recent years there has been increased attention paid to the importance of assessment in Geographical Education, the chosen subject for this book. Assessment is an important tool for collecting information about student learning and for providing timely data to inform key stakeholders including students, teachers, parents and policymakers. To be effective, assessment needs to be valid, reliable and fair. Validity is about ensuring that we assess what we claim we are assessing. Reliability is about measuring performance and understanding in a consistent way. Without validity and reliability, assessment is unlikely to provide equitable opportunities for students to demonstrate what they know and can do. As geography educators it is therefore important that we identify the core concepts and skills in geography that we want students to master. We need a clear understanding of what the progression of learning looks like for each concept and skill so we can develop fit for purpose assessments that track and improve student learning. While there is a substantial literature on evidence-based assessment in secondary school contexts, research exploring best-practice assessment in geography is rare. This is a concern given the distinctive nature of geography and the important role of assessment in the learning process. This scholarly collection seeks to address this issue by connecting research in educational assessment with the domain of geography. The chapters are written by leading researchers in Geographical Education from across the globe. These chapters provide examples of innovation through the collective voices of geography teacher educator scholars from across Australia, USA, South Korea, Germany, Switzerland and Singapore. What unifies the work in this book, is that each chapter focuses on a key feature of the discipline of geography, providing scholarly examples of evidence-based practices for assessing student's knowledge and skills.

**Holocaust and Conceptions of German(y) by Israeli learners of German (DAF)** - Marc-Philip Hermann-Cohen 2021-06-17

The Holocaust is inseparable from the Israeli identities even seven decades following the atrocities during World War II, Israeli daily life is shaped by the horrible crimes committed by the Nazis. This book conceptualizes the intricacies of the Israeli identity in relation to learning German as a foreign language (GFL) in Israel throughout the course of history and the changing conception of Germany. This book includes an analysis of a selection of twenty-five GFL language books which reflect the stigmatization and tabooization of the Holocaust and also the qualitative analysis of a subject pool of 105 learners of GFL. The author finds that identities are co-constituted by four individualized Thought Styles, a concept borrowed from Ludwik Fleck. Thought Styles capture the individual perspective of the language learner's view of Germany and are categorized in this thesis as German Engineering, Cold Germany, Neo-Nazi Germany, and The Other Germany. The research draws from discourse theory, critical psychology, and the oft-overlooked classical theory of Ludwik Fleck. Although the relationship between Germany and Israel has been amicable for the last six decades, the choice for Israelis to learn the language that was used by a nation that once attempted to eradicate the Jewish people is emotive and infinitely complex.

**Advances in Geoethics and Groundwater Management : Theory and Practice for a Sustainable Development** - Manuel Abrunhosa 2021-03-30

This book gathers the peer-reviewed proceedings of the 1st congress on Geoethics & Groundwater Management (GEOETH&GWM'20), held in Porto, Portugal, in an online format on 18-22 May 2020. Hosted in School of Engineering (ISEP), Polytechnic of Porto based on Porto city (a UNESCO World Heritage Site), the international conference focused on what has now been dubbed "hydrogeoethics", a novel transdisciplinary, scientific field integrating all dimensions of geoethics in groundwater science and practice. Given its scope, the book is of interest to all researchers and practitioners in the geosciences, hydrology, water resources, hydrogeology, natural resources management, environment,

engineering, law, sociology, education, philosophy, culture, among others. This joint congress is the result of a collaborative agreement between the IAH (International Association of Hydrogeologists) and IAPG (International Association for Promoting Geoethics) and reflects the need for concerted actions to achieve sustainable development. The diversity, scale, significance and increasing magnitude of anthropogenic interactions with aquifers and groundwater, which often involve conflicting values or interests, call for analysis, discussions and decisions on the part of the agents involved, e.g. groundwater scientists, policymakers, managers, organisations, professionals and citizens. This approach calls for a responsible, sustainable and human approach to groundwater use and management. The groundwater community involved in the exploration and exploitation, use and management of this increasingly vital natural resource is becoming more and more aware that ethical issues pervade all our attitudes from concept to action and need to be addressed. Diverse values and cultures, science and education, law and policies, human and natural environments and the public and the economic sectors view groundwater and its value and/or role differently. The authors believe that in a globalised and interconnected world, common ground must be found in the interest of peace, human development and sustainability. The main topics covered here include: 1. Fundamentals of hydrogeoethics: cultures, principles and geoethical values on groundwater science and engineering 2. Lessons for a resilient and sustainable future with hydrogeoethics: case studies of geoethics in groundwater science-engineering, profession, and management 3. Scientific and humanistic components of hydrogeoethics in groundwater education and professional training 4. Socio-hydrogeology and ethical groundwater management 5. Geoethics of decision making under uncertainty and ethical issues in neglecting groundwater functioning 6. Groundwater: geological, legal, social, and ethical challenges of a unique natural resource

[Perspectives of Black Histories in Schools](#) - LaGarrett J. King 2019-11-01

Concerned scholars and educators, since the early 20th century, have asked questions regarding the viability of Black history in k-12 schools. Over the years, we have seen k- 12 Black history expand as an academic subject, which has altered research questions that deviate from whether Black history is important to know to what type of Black history knowledge and pedagogies should be cultivated in classrooms in order to present a more holistic understanding of the group's historical significance. Research around this subject has been stagnated, typically focusing on the subject's tokenism and problematic status within education. We know little of the state of k-12 Black history education and the different perspectives that Black history encompasses. The book, *Perspectives on Black Histories in Schools*, brings together a diverse group of scholars who discuss how k-12 Black history is understood in education. The book's chapters focus on the question, what is Black history, and explores that inquiry through various mediums including its foundation, curriculum, pedagogy, policy, and psychology. The book provides researchers, teacher educators, and historians an examination into how much k- 12 Black history has come and yet how long it still needed to go.

[Examining Multiple Intelligences and Digital Technologies for Enhanced Learning Opportunities](#) - Zheng, Robert Z. 2019-09-27

Multiple intelligences (MI) as a cognitive psychology theory has significantly influenced learning and teaching. Research has demonstrated a strong association between individual intelligences and their cognitive processes and behaviors. However, it remains unknown how each of or a combination of these intelligences can be effectively optimized through instructional intervention, particularly through the use of emerging learning technology. On the other hand, while efforts have been made to unveil the relationship between information and communication technology (ICT) and individual learner performance, there is a lack of knowledge in how MI theory may guide the use of ICTs to enhance learning opportunities for students. *Examining Multiple Intelligences and Digital Technologies for Enhanced Learning Opportunities* is an essential reference book that generates new knowledge about how ICTs can be utilized to promote MI in various

formal and informal learning settings. Featuring a range of topics such as augmented reality, learning analytics, and mobile learning, this book is ideal for teachers, instructional designers, curriculum developers, ICT specialists, educational professionals, administrators, instructors, academicians, and researchers.

[Ancient Supercontinents and the Paleogeography of Earth](#) - Lauri J Pesonen 2021-10-06

*Ancient Supercontinents and the Paleogeography of Earth* offers a systematic examination of Precambrian cratons and supercontinents. Through detailed maps of drift histories and paleogeography of each continent, this book examines topics related to Earth's tectonic evolution prior to Pangea, including plate kinematics, orogenic development, and paleoenvironments. Additionally, this book discusses the methodologies used, principally paleomagnetism and tectonostratigraphy, and addresses geophysical topics of mantle dynamics and geodynamo evolution over billions of years. Structured clearly with consistent coverage for Precambrian cratons, this book combines state-of-the-art paleomagnetic and geochronologic data to reconstruct the paleogeography of the Earth in the context of major climatic events such

as global glaciations. It is an ideal, up-to-date reference for geoscientists and geographers looking for answers to questions surrounding the tectonic evolution of Earth. Provides robust paleogeographies of Precambrian cratons based on high-quality paleomagnetic and geochronologic data and critically tested by global geological datasets. Includes links to updated databases for the Precambrian such as PALEOMAGIA and the Global Paleomagnetic Database (GPMDB). Presents full-color maps of the drift histories of each continent as well as their paleogeographies. Discusses key questions regarding continental drift, the supercontinent cycle, and the geomagnetic dipole hypothesis and analyzes palaeogeography in the context of Earth's holistic evolution.

Education Reform and the Limits of Policy - Michael Addonizio 2012

While there is no doubt that an abundance of newly enacted education policies abounds across the state and across the nation, more fundamental questions remain. What is the nature of these reforms? What do they hope to accomplish? How successful have they been? In this book, we attempt to provide some answers to these questions by examining a major set of education policy reforms undertaken in Michigan and across the country over the past 20 or more years. These innovations include finance reform, state assessment of student performance, a series of school accountability measures, charter schools, schools of choice, and, for Detroit, a bevy of oft-conflicting policies and reform efforts that have belabored but seldom helped its public schools. In the pages that follow, we examine the decidedly mixed outcomes and effects of this large array of reform policies and programs. Each chapter addresses a specific policy area, outlining reform activity across the nation with an emphasis on Michigan's efforts as well as on one or two states that led these changes.

The ability to effectively communicate in a globalized world shapes the economic, social, and democratic implications for the future of P-12 students. Digitally mediated communication in an inclusive classroom increases a student's familiarity and comfortability with multiple types of media used in a wider technological culture. However, there is a need for research that explores the larger context and methodologies of participatory literacy in a digital educational space. *Participatory Literacy Practices for P-12 Classrooms in the Digital Age* is an essential collection of innovative research on the methods and applications of integrating digital content into a learning environment to support inclusive classroom designs. While highlighting topics such as game-based learning, coding education, and multimodal narratives, this book is ideally designed for practicing instructors, pre-service teachers, professional development coordinators, instructional facilitators, curriculum designers, academicians, and researchers seeking interdisciplinary coverage on how participatory literacies enhance a student's ability to both contribute to the class and engage in opportunities beyond the classroom.

Get Out Now - Mary Rice Hasson 2018-08-14

Should we stay or should we go? Millions of parents with children in public schools can't believe they're asking this question. But they are. And you should be asking it too. Almost overnight, America's public schools have become morally toxic. And they are especially poisonous for the hearts and minds of children from religious families of every faith—ordinary families who value traditional morality and plain old common sense. Parents' first duty is to their children—to their intellect, their character, their souls. The facts on the ground point to one conclusion: get out now.

**Responding to Learner Diversity and Learning Difficulties** - Dennis Conrad 2018-10-01

*Caribbean Discourse in Inclusive Education Volume II "Responding to Learner Diversity and Learner Difficulties"* shares selected critical reflections and recommendations on the way educational communities respond to student diversity and difficulties learning. These contexts include the Caribbean, the Diaspora, and beyond. Authors explore issues and strategies for realizing and sustaining the agenda of education for all within primarily, but not limited to, the Caribbean. While the authors are aware of the ongoing debate between the terms 'education for all' and 'inclusive education', we use these terms interchangeably. We hold the position that inclusive education is about commitment to removing barriers to optimum learning for all learners regardless of age, ability, ethnicity, gender, geography, race, religion, sexual orientation or other differences. 'Responding to Learner Diversity and Difficulties' extend the discourse to include stakeholders committed to sharing their experiences and strategies for overcoming barriers to inclusive education. This second volume presents research that examines how teachers can respond to students with disabilities and difficulties learning, teach challenging curriculum content in mathematics and literacy, build citizenship through student voice, improve teacher practice via co-teaching and critical reflection, promote inclusive practice through leadership and advocacy. It can be used as a core text or companion reader for students at the undergraduate and graduate levels, lecturers, practitioners, researchers and policy makers.

*Learning in the Fast Lane* - Chester E. Finn, Jr. 2021-05-11

"More than three million high-school students take five million Advanced Placement exams each May, yet remarkably little is known about how this sixty-year-old, privately-run program, has become one of U.S. education's greatest successes. From its mid-century origin as a tiny option for privileged kids from posh schools, AP has also emerged as a booster rocket into college for hundreds of thousands of disadvantaged youngsters. It challenges smart kids, affects school ratings, affords rewarding classroom challenges to great teachers, tunes up entire schools, and draws vast support from philanthropists, education reformers and policymakers. AP stands as America's foremost source of college-level academics for high school pupils. Praised for its rigor and integrity, more than 22,000 schools now offer some-or many-of its thirty-eight subjects, from Latin to calculus, art to computer science. But challenges abound today, as AP faces stiffening competition (especially dual credit), curriculum wars, charges of elitism, misgivings by elite schools and universities, and the arduous work of infusing rigor into schools that lack it and academic success into young people unaccustomed to it. In today's polarized climate, can Advanced Placement maintain its lofty standards and overcome the hostility, politics and despair that have sunk so many other bold education ventures? *Advanced Placement: The Unsung Success Story of American Education* is a unique account-richly documented and thoroughly readable-of the AP program in all its strengths and travails, written by two of America's most respected education analysts"--
