

Green Cultural Criminology Constructions Of Environmental Harm Consumerism And Resistance To Ecocide New Directions In Critical Criminology

Eventually, you will utterly discover a new experience and achievement by spending more cash. yet when? do you assume that you require to acquire those every needs past having significantly cash? Why dont you try to acquire something basic in the beginning? Thats something that will lead you to comprehend even more as regards the globe, experience, some places, when history, amusement, and a lot more?

It is your unconditionally own grow old to play reviewing habit. in the middle of guides you could enjoy now is **green cultural criminology constructions of environmental harm consumerism and resistance to ecocide new directions in critical criminology** below.

Routledge International Handbook of Green Criminology - Nigel South 2020-04-14

The Routledge International Handbook of Green Criminology was the first comprehensive and international anthology dedicated to green criminology. It presented green criminology to an international audience, described the state of the field, offered a description of a range of environmental issues of regional and global importance, and argued for continued criminological attention to environmental crimes and harms, setting an agenda for further study. In the six years since its publication, the field has continued to grow and thrive. This revised and expanded second edition of the Handbook reflects new methodological orientations, new locations of study such as Asia, Canada and South America, and new responses to environmental harms. While a number of the original chapters have been revised, the second edition offers a range of fresh chapters covering new and emerging areas of study, such as: conservation criminology, eco-feminism, environmental victimology, fracking, migration and eco-rights, and e-waste. This handbook continues to define and capture the field of green criminology and is essential reading for students and researchers engaged in green crime and environmental harm.

Historical Pollution - Francesco Centonze 2017-08-05

This volume examines legal matters regarding the prevention and fighting of historical pollution caused by industrial emissions. "Historical pollution" refers to the long-term or delayed onset effects of environmental crimes such as groundwater or soil pollution. Historical Pollution presents and compares national legal approaches, including the most interesting and effective mechanisms for managing environmental problems in relation with historical pollution. It features interdisciplinary and international comparisons of traditional and alternative justice mechanisms. This book will be of interest to researchers in criminology and criminal justice and related areas, such as politics, law, and economics, those in the public and private sectors dealing with environmental protection, including international institutions, corporations, specialized national agencies, those involved in the criminal justice system, and policymakers.

Crimes Against Nature - Rob White 2013-08-21

Crimes Against Nature provides a systematic account and analysis of the key concerns of green criminology, written by one of the leading authorities in the field. The book draws upon the disciplines of environmental studies, environmental sociology and environmental management as well as criminology and socio-legal studies, and draws upon a wide range of examples of crimes against the environment - ranging from toxic waste, logging, wildlife smuggling, bio-piracy, the use and transport of ozone depleting substances through to illegal logging and fishing, water pollution and animal abuse. The book is divided into three parts: Part 1 sets out theoretical approaches and perspectives on the subject; Part 2 explores the (national and international) dimensions of environmental crime and the explanations for it; Part 3 deals with the range of responses to environmental crime - environmental law enforcement, regulation, environmental crime prevention and the role of global institutions and movements.

The Treadmill of Crime - Paul B. Stretesky 2013-08-15

Drawing on the work of Allan Schnaiberg, this book returns political economy to green criminology and examines how the expansion of capitalism shapes environmental law, crime and justice. The book is organized around crimes of ecological withdrawals and ecological additions. The Treadmill of Crime is

written by acclaimed experts on the subject of green criminology and examines issues such as the crime in the energy sector as well as the release of toxic waste into the environment and its impact on ecosystems. This book also sets a new research agenda by highlighting problems of ecological disorganization for animal abuse and social disorganization. This book will be of interest to students, researchers and academics in the fields of criminology, political science, environmental sociology, and natural resources.

Visual Criminology - McClanahan, Bill 2021-07-16

From fine art to popular digital culture, criminologists are increasingly engaged in the processes of the visual. In this pioneering work, Bill McClanahan provides a concise and lively overview of the origins and contemporary role of visual criminology. Detailing and employing the most prominent approaches at work in visual criminology, this book explores the visual perspective in relation to prisons, police, the environment, and drugs, while noting the complex social and ethical implications embedded in visual research. This original book broadens the horizons of criminological engagement and reveals how visual criminology offers new and critical ways to understand and theorize crime and harm.

Geometries of Crime - Avi Brisman 2016-07-30

This book explores how young people perceive the severity of crime and delinquency. It particularly addresses whom or what they consider to be the victims of crime and delinquency, how they analyze and assess appropriate responses by the criminal justice system, as well as their place within it. The book proposes tools for developing a more elaborate and robust understanding of what constitutes crime, identifying those affected by it, and what is deemed adequate or appropriate punishment. In so doing, it offers thick description of young peoples' conceptions of and experiences with crime, delinquency, justice and law, and uses this description to interrogate the role of the state in influencing - indeed, shaping - these perceptions.

Greening Criminology in the 21st Century - Matthew Hall 2016-11-25

In the 21st century, environmental harm is an ever-present reality of our globalised world. Over the last 20 years, criminologists, working alongside a range of other disciplines from the social and physical sciences, have made great strides in their understanding of how different institutions in society, and criminal justice systems in particular - respond - or fail to respond - to the harm imposed on ecosystems and their human and non-human components. Such research has crystallised into the rapidly evolving field of green criminology. This pioneering volume, with contributions from leading experts along with younger scholars, represents the state of the art in criminologists' pursuit of understanding in the environmental sphere while at the same time challenging academics, lawmakers and policy developers to explore new directions in the study of environmental harm.

Routledge Handbook of Critical Criminology - Walter S. DeKeseredy 2018-04-09

The main objective of the second edition of the Routledge Handbook of Critical Criminology is twofold: (1) to provide original chapters that cover contemporary critical criminological theoretical offerings generated over the past five years and (2) to provide chapters on important new substantive topics that are currently being studied and theorized by progressive criminologists. Special attention is devoted to new theoretical directions in the field, such as southern criminology, queer criminology, and green criminology. The diverse

chapters cover not only cutting-edge theories, but also the variety of research methods used by leading scholars in the field and the rich data generated by their rigorous empirical work. In addition, some of the chapters suggest innovative and realistic short- and long-term policy proposals that are typically ignored by mainstream criminology. These progressive strategies address some of the most pressing social problems facing contemporary society today, which generate much pain and suffering for socially and economically disenfranchised people. The new edition of the Handbook is a major work in redefining areas within the context of international multidisciplinary critical research, and in highlighting emerging areas, such as human trafficking, Internet pornography and image-based sexual abuse. It is specifically designed to be a comprehensive resource for undergraduate and postgraduate students, researchers and policymakers.

Southern Green Criminology - David Rodríguez Goyes 2019-10-10

Southern Green Criminology focuses on the threat the western world poses to the rest of the globe, and how Western imposed ideas of progress are damaging the planet, especially the southern hemisphere.

Environmental Crime and Social Conflict - Andi Brisman 2016-03-09

This impressive collection of original essays explores the relationship between social conflict and the environment - a topic that has received little attention within criminology. The chapters provide a systematic and comprehensive introduction and overview of conflict situations stemming from human exploitation of environments, as well as the impact of social conflicts on the wellbeing and health of specific species and ecosystems. Largely informed by green criminology perspectives, the chapters in the book are intended to stimulate new understandings of the relationships between humans and nature through critical evaluation of environmental destruction and degradation associated with social conflicts occurring around the world. With a goal of creating a typology of environment-social conflict relationships useful for green criminological research, this study is essential reading for scholars and academics in criminology, as well as those interested in crime, law and justice.

Legitimizing Corporate Harm - Jennifer L. Schally 2017-11-30

This book utilizes critical discourse analysis to illuminate the ways in which one of the largest agribusinesses in operation, Tyson Foods, disguises their actions whilst simultaneously presenting the image of a benign, good corporate citizen. Schally unveils how the discourses employed by Tyson gain legitimacy by drawing on and aligning with larger cultural discourses that are often taken for granted and not adequately scrutinised. This original research, situated at the intersection of green and cultural criminologies, contributes to these current perspectives as well as to the burgeoning social harm approach within criminology. A bold and engaging study, this book will be indispensable for students and scholars of green criminology, corporate crime, animals and society, and environmental sociology, as well as environmental and animal rights activists.

Green Harms and Crimes - R. Sollund 2016-01-12

The book presents discussions of the application of Stan Cohen's theories alongside empirical contributions in the fields of critical and green criminology. Taken together, the authors critically address harms and crimes against the environment, as well as against human and nonhuman victims.

Routledge International Handbook of Green Criminology - Nigel South 2013-08-29

Academic and general interest in environmental crimes, harms, and threats, as well as in environmental legislation and regulation, has grown sharply in recent years. The Routledge International Handbook of Green Criminology is the most in-depth and comprehensive volume on these issues to date. With contributions from leading international green criminologists and scholars in related fields, the Handbook examines a wide range of substantive issues, including: climate change corporate criminality and impacts on the environment environmental justice media representations pollution (e.g. air, water) questions of responsibility and risk wildlife trafficking The chapters explore green criminology in depth, its theory, history and development, as well as methodological concerns for this area of academic interest. With examples of environmental crimes, harms, and threats from Africa, Asia, Australia, Eastern Europe, South America, the United Kingdom, and the United States, this book will serve as a vital resource for international scholars and students in criminology, sociology, law and socio-legal studies, as well as environmental science, environmental studies, politics and international relations.

A Visual Approach for Green Criminology - Lorenzo Natali 2016-11-07

This book brings the visual dimension of environmental crimes and harms into the field of green criminology. It shows how photographic images can provide a means for eliciting narratives from people who live in polluted areas - describing in detail and from their point of view what they know, think and feel about the reality in which they find themselves living. Natali makes the argument for developing a visual approach for green criminology, with a single case-study as its central focus, revealing the importance of using photo elicitation to appreciate and enhance the reflexive and active role of social actors in the symbolic and social construction of their environmental experiences. Examining the multiple interactions between the images and the words used to describe the socio-environmental worlds in which we live, this book is a call to open the eyes of green criminology to wider and richer explorations of environmental harms and crimes. An innovative and engaging study, this text will be of particular interest to scholars of environmental crime and cultural, green and visual criminologies.

Greening Criminology in the 21st Century - Matthew Hall 2016-11-25

In the 21st century, environmental harm is an ever-present reality of our globalised world. Over the last 20 years, criminologists, working alongside a range of other disciplines from the social and physical sciences, have made great strides in their understanding of how different institutions in society, and criminal justice systems in particular - respond - or fail to respond - to the harm imposed on ecosystems and their human and non-human components. Such research has crystallised into the rapidly evolving field of green criminology. This pioneering volume, with contributions from leading experts along with younger scholars, represents the state of the art in criminologists' pursuit of understanding in the environmental sphere while at the same time challenging academics, lawmakers and policy developers to explore new directions in the study of environmental harm.

Environmental Crime in Transnational Context - Toine Spapens 2016-06-10

Environmental crime is one of the most profitable and fastest growing areas of international criminal activity. The increasing cross-border scope of environmental crimes and harms is one of the reasons why governments and the enforcement community have trouble in finding the proper responses. Law enforcement cooperation between western industrialized states is often time consuming and problematic, and the problems increase exponentially when environmental criminals take advantage of situations where government and law enforcement are weak. This book provides an overview of the developments and problems in the field of transnational environmental crimes and harms, addressing these issues from perspectives such as enforcement, deterrence, compliance and emission trading schemes. Divided into four parts, the authors consider global issues in green criminology, responses to transnational environmental crimes and harms, alternative methods to combat environmental crime, and specific types of crimes and criminological research. Discussing these topics from the view of green criminology, sociology and governance, this book will be of great interest to all those concerned about the transnational dimensions of crime and the environment.

The Politics of Palm Oil Harm - Hanneke Mol 2017-08-16

This book examines the politics of harm in the context of palm oil production in Colombia, with a primary focus on the Pacific coast region. Globally, the palm oil industry is associated with practices that fit the most conventional definitions and perceptions of crime, but also crucially, forms of social and environmental harm that do not fit strictly legalistic definitions and understandings of crime. Drawing on rich field-based data from the region, Mol contributes empirically to an awareness of the constructions, practices, and the lived and perceived realities of harm related to palm oil production. She advances criminological debate around 'harm' by putting forward a theoretical and analytical approach that redirects the debate from a central concern with the academic contestedness of harm within criminology, towards a focus on the 'on-the-ground' contestedness of palm oil-related harm in Colombia. Detailed analysis and arresting conclusions ensure this book will be of great interest to students and scholars in the fields of Green and Critical Criminology, Environmental Sociology, and International and Critical Development Studies.

Green Criminology - Bill McClanahan 2021-04-28

In the past three decades, a stream of criminological inquiry has emerged which explores, measures, and theorizes crimes and harms to the environment at the micro-, mezzo-, and macro-levels. This "green

criminology", as it has come to be known, has widened the criminological gaze to consider crimes and harms committed against air, land (from forests to wetlands), nonhuman animals, and water in local, regional, national, and international areas or arenas. Accordingly, green criminology has endeavored to understand the causes and consequences of air and water pollution, biodiversity loss, climate change, corporate environmental crime (e.g., illegal waste disposal), food production and distribution, resource extraction and exploitation, and wildlife trade and trafficking, while also exploring potential responses to these issues. This book seeks to introduce the green criminological perspective to a broader social science audience. Recognizing that green criminology is not the first social science to explore the phenomena and harms at the intersections of humanity and ecology, this book offers an introduction to some of the unique insights developed over nearly 30 years of green criminological thought and scholarship to students, professors, researchers, and practitioners working in the fields of anthropology, economics, environmental humanities, environmental sociology, geography, history, and political ecology. This book contains contributions from researchers in green criminology from around the world, including early- and mid-career scholars, as well as more established voices in the field—all of whom are dedicated to exposing, understanding, and ultimately hoping to thwart further environmental degradation and despoliation.

Forging a Socio-Legal Approach to Environmental Harms - Tiffany Bergin 2017-06-14

Environmental harms exert a significant toll and pose substantial economic costs on societies around the world. Although such harms have been studied from both legal and social science perspectives, these disciplinary-specific approaches are not, on their own, fully able to address the complexity of these environmental challenges. Many legal approaches, for example, are limited by their inattention to the motivations behind environmental offences, whereas many social science approaches are hindered by an insufficient grounding in current legislative frameworks. This edited collection constitutes a pioneering attempt to overcome these limitations by uniting legal and social science perspectives. Together, the book's contributors forge an innovative socio-legal approach to more effectively respond to, and to prevent, environmental harms around the world. Integrating theoretical and empirical work, the book presents carefully selected illustrations of how legal and social science scholarship can be brought together to improve policies. The various chapters examine how a socio-legal approach can ultimately lead to a more comprehensive understanding of environmental harms, as well as to innovative and effective responses to such environmental offences.

The Routledge Handbook of Technology, Crime and Justice - M. R. McGuire 2017-02-24

Technology has become increasingly important to both the function and our understanding of the justice process. Many forms of criminal behaviour are highly dependent upon technology, and crime control has become a predominantly technologically driven process – one where 'traditional' technological aids such as fingerprinting or blood sample analysis are supplemented by a dizzying array of tools and techniques including surveillance devices and DNA profiling. This book offers the first comprehensive and holistic overview of global research on technology, crime and justice. It is divided into five parts, each corresponding with the key stages of the offending and justice process: Part I addresses the current conceptual understanding of technology within academia and the criminal justice system; Part II gives a comprehensive overview of the current relations between technology and criminal behaviour; Part III explores the current technologies within crime control and the ways in which technology underpins contemporary formal and informal social control; Part IV sets out some of the fundamental impacts technology is now having upon the judicial process; Part V reveals the emerging technologies for crime control and justice and considers the extent to which new technology can be effectively regulated. This landmark collection will be essential reading for academics, students and theorists within criminology, sociology, law, engineering and technology, and computer science, as well as practitioners and professionals working within and around the criminal justice system.

Green Cultural Criminology - Avi Brisman 2014

Over the last two decades, "green criminology" has emerged as a unique area of study, bringing together criminologists possessing a wide range of research interests and varying theoretical orientations, spanning the micro to the macro, from work on individual-level environmental crimes to business/corporate violations to state transgressions. There has been little work however attempting to explicitly or implicitly integrate

cultural criminology into green criminology. This book moves towards articulating a theory of green cultural criminology....

Green Criminology Nigel South 2017-07-05

In little more than a decade, Green Criminology has become an established new perspective in the field. It embraces an exciting and wide range of topics, from controversies about genetic modification through corporate offending against the environment and human communities, to animal abuse. Green Criminology provides a focal point for longstanding and new areas of research as well as making important interdisciplinary connections.

Routledge International Handbook of Visual Criminology Michelle Brown 2017-07-06

Dynamically written and richly illustrated, the Routledge International Handbook of Visual Criminology offers the first foundational primer on visual criminology. Spanning a variety of media and visual modes, this volume assembles established researchers whose work is essential to understanding the role of the visual in criminology and emergent thinkers whose work is taking visual criminology in new directions. This book is divided into five parts that each highlight a key aspect of visual criminology, exploring the diversity of methods, techniques and theoretical approaches currently shaping the field: • Part I introduces formative positions in the developments of visual criminology and explores the different disciplines that have contributed to analysing images. • Part II explores visual representations of crime across film, graphic art, documentary, police photography, press coverage and graffiti and urban aesthetics. • Part III discusses the relationship of visual criminology to criminal justice institutions like policing, punishment and law. • Part IV focuses on the distinctive ethical problems posed by the image, reflecting on the historical development, theoretical disputes and methodological issues involved. • Part V identifies new frameworks and emergent perspectives and reflects upon the distinctive challenges and limits that can be seen in this emerging field. This book includes a vibrant colour plate section and over a hundred black and white images, breaking down the barriers between original photography and artwork, historic paintings and illustrations and modern comics and films. This interdisciplinary book will be of interest to criminologists, sociologists, visual ethnographers, art historians and those engaged with media studies.

Ti nber Traffi cki ng i n Vi et nam Ngoc Anh Cao 2018-02-09

This book is the first systematic investigation into the problem of timber trafficking in Vietnam, providing a detailed understanding of the typology of, victimization from, and key factors driving this crime. The book first reveals a multifaceted pattern of timber trafficking in Vietnam, comprising five different components: harvesting, transporting, trading, supporting, and processing. It then assesses the crime's victimization from timber trafficking. Thanks to the employment of a broad conceptual framework of human security, Cao reveals that timber trafficking has substantial harmful impacts on all seven elements of human security: economic, food, health, environmental, personal, community, and political; whilst being closely interconnected, they vary between different groups of victims. Cao concludes by offering five solutions to better control of timber trafficking in the context of Vietnam, which crucially involve refining the current policy framework of forest governance and improving the efficiency of law enforcement. A wide-ranging and timely study, this book will hold particular appeal for scholars of green criminology and environmental harm.

Quantitative Studies in Green and Conservation Criminology - Michael J. Lynch 2019-07-17

During the early development and throughout the short history of green/conservation criminology, limited attention has been directed toward quantitative analyses of relevant environmental crime, law and justice concerns. While recognizing the importance of establishing a theory and terminology in the early stages of development, this book redresses this imbalance. The work features contributions that undertake empirical quantitative studies of green/conservation crime and justice issues by both conservation and green criminologists. The collection highlights the shared concerns of these groups within important forms of ecological crime and victimization, and illustrates the ways in which these approaches can be undertaken quantitatively. It includes quantitative conservation/green criminological studies that represent the work of both well-established scholars in these fields, along with studies by scholars whose works are less well-known and who are also contributing to shaping this area of research. The book presents a valuable contribution to the areas of Green and Conservation Criminology. It will appeal to academics and students

working in these areas.

Fighting Environmental Crime in Europe and Beyond - Ragnhild Sollund 2017-03-27

This book brings together the findings of a multi-disciplinary and international research project on environmental crime in Europe, funded by the European Union (EU). "European Union Action to Fight Environmental Crime" (EFFACE) was a 40-month research project that included eleven European research institutions and think tanks and was led by Ecologic Institute Berlin. EFFACE assessed the impacts of environmental crime as well as effective and feasible policy options for combating it from a multidisciplinary perspective, with a focus on the EU. As part of this project, numerous instances of environmental crime within and outside of the EU were studied and are now presented in this volume. This edited collection is highly innovative in showing not only the many facets of environmental crime, but also how it should be conceptualised and the consequences. An original and rigorous study, this book will be of particular interest to policy makers and scholars of green criminology and environmental studies.

Criminal Anthroposcenes - Anita Lam 2020-06-09

This book compares and contrasts traditional crime scenes with scenes of climate crisis to offer a more expansive definition of crime which includes environmental harm. The authors reconsider what crime scenes have always included and might come to include in the age of the Anthropocene - a new geological era where humans have made enough significant alterations to the global environment to warrant a fundamental rethinking of human-nonhuman relations. In each of the chapters, the authors reframe enduringly popular Arctic scenes, such as iceberg hunting, cruising and polar bear watching, as specific criminal anthroposcenes. By reading climate scenes in this way, the authors aim to productively deploy the representation of crime to make these scenes more engaging to policymakers and ordinary viewers. Criminal Anthroposcenes brings together insights from criminology, climate change communication, and tourism studies in order to study the production and consumption of media representations of Arctic climate change in the hope of mobilizing more urgent public and policy responses to climate change.

Green Criminology and the Law - James Gacek 2021

This edited collection is grounded in a green criminological approach to understand whether the law, both in effect and implications, reflects, refracts, or sublimates the social, political and ecological conditions of our times. Since its initial proposal in the 1990s, green criminology has focused the criminological gaze on a wide array of harms and crimes affecting humans, animals other than humans, ecological systems, and the planet as a whole. As a continuously blossoming field of criminological inquiry, green criminology recognizes and examines behaviours that are both illegal and legal (yet detrimental), and in varying ways has made great efforts to provide insight into harms in a more fulsome manner. At the same time, there have been many significant legal instances, domestic, and international, including case law, legislation, regulation, treaties, agreements and executive directives which have troubled the laws understanding of green harms, illegal and legal activity, pushing legal boundaries in the process. Recognizing that humanity and nature are inextricably integrated, Green Criminology and the Law reflects the range and depth of high-quality research and scholarship, combining contributions from established scholars willing to explore new topics and recent entrants who are breaking new scholarly ground.

The Emerald Handbook of Narrative Criminology - Jennifer Fleetwood 2019-10-07

Over 23 chapters this Handbook reflects the diversity of methodological approaches employed in the emerging field of narrative criminology.

Green Criminology - Michael J. Lynch 2017-08-22

This groundbreaking text provides students with an overview and assessment of green criminology as well as a call to action. Green Criminology draws attention to the ways in which the political-economic organization of capitalism causes ecological destruction and disorganization. Focusing on real-world issues of green crime and environmental justice, chapters examine ecological withdrawals, ecological additions, toxic towns, wildlife poaching and trafficking, environmental laws, and nongovernmental environmental organizations. The book also presents an unthreatening introduction to research from the physical sciences on issues such as climate change, pollution levels, and the ecological footprint of humans, providing a truly interdisciplinary foundation for green criminological analysis. To help students succeed in the course—and to encourage them to see themselves as future green criminology researchers—the end-of-chapter study

guides include: • Questions and Activities for Students that review topics students should be able to conceptualize and address. • Lessons for Researchers that suggest additional areas of research in the study of green crime.

Exploring Green Criminology Michael J. Lynch 2016-04-22

Few criminologists have drawn attention to the fact that widespread and significant forms of harm such as green or environmental crimes are neglected by criminology. Others have suggested that green crimes present the most important challenge to criminology as a discipline. This book argues that criminology needs to take green harms more seriously and to be revolutionized so that it forms part of the solution to the large environmental problems currently faced across the world. It asks how criminology should be redesigned to consider green/environmental harm as a key area of study in an era where destruction of the earth and the world's ecosystem is a major concern and examines why this has remained unaccomplished so far. The chapters in this book apply an environmental frame of reference underlying a green approach to issues which can be addressed from within criminology and which can encourage criminologists and environmentalists to respond and react differently to environmental crime.

Quantitative Studies in Green and Conservation Criminology - Michael J. Lynch 2019-07-17

During the early development and throughout the short history of green/conservation criminology, limited attention has been directed toward quantitative analyses of relevant environmental crime, law and justice concerns. While recognizing the importance of establishing a theory and terminology in the early stages of development, this book redresses this imbalance. The work features contributions that undertake empirical quantitative studies of green/conservation crime and justice issues by both conservation and green criminologists. The collection highlights the shared concerns of these groups within important forms of ecological crime and victimization, and illustrates the ways in which these approaches can be undertaken quantitatively. It includes quantitative conservation/green criminological studies that represent the work of both well-established scholars in these fields, along with studies by scholars whose works are less well-known and who are also contributing to shaping this area of research. The book presents a valuable contribution to the areas of Green and Conservation Criminology. It will appeal to academics and students working in these areas.

The Palgrave Handbook of Environmental Restorative Justice - Brunilda Pali 2022-09-19

This handbook explores the dynamic new field of Environmental Restorative Justice. Authors from diverse disciplines discuss how principles and practices of restorative justice can be used to address the threats and harms facing the environment today. The book covers a wide variety of subjects, from theoretical discussions about how to incorporate the voice of future generations, nature, and more-than-human animals and plants in processes of justice and repair, through to detailed descriptions of actual practices of Environmental Restorative Justice. The case studies explored in the volume are situated in a wide range of countries and in the context of varied forms of environmental harm - from small local pollution incidents, to endemic ongoing issues such as wildlife poaching, to cataclysmic environmental catastrophes resulting in cascades of harm to entire ecosystems. Throughout, it reveals how the relational and caring character of a restorative ethos can be conducive to finding solutions to problems through sharing stories, listening, healing, and holding people and organisations accountable for prevention and repairing of harm. It speaks to scholars in Criminology, Sociology, Law, and Environmental Justice and to practitioners, policy-makers, think-tanks and activists interested in the environment.

Water, Crime and Security in the Twenty-First Century - Avi Brisman 2018-04-03

Water, Crime and Security in the Twenty-First Century represents criminology's first book-length contribution to the study of water and water-related crimes, harms and security. The chapters cover topics such as: water pollution, access to fresh water in the Global North and Global South, water and climate change, the commodification of water and privatization, water security and pacification, and activism and resistance surrounding issues of access and pollution. With examples ranging from Rio de Janeiro to Flint, Michigan to the Thames River, this original study offers a comprehensive criminological overview of the contemporary and historical relationship between water and crime. Coinciding with the International Decade for Action, "Water for Sustainable Development," 2018-2028, this timely volume will be of particular relevance to students and scholars of green criminology, as well as those interested in critical

geography, environmental anthropology, environmental sociology, political ecology, and the study of corporate crime and state crime.

Conservation Criminology - Meredith L. Gore 2017-03-14

This important new text introduces conservation criminology as the interdisciplinary study of environmental exploitation and risks at the intersection of human and natural systems. Taking an interdisciplinary approach, the book enhances understanding of the various human and organizational behaviors that pose risks to the environment, humans, and drive conservation crime. As human population growth, global market economies, climate change, deforestation, and illegal exploitation of natural resources continue to increase, academic research from numerous disciplines is needed to address these challenges.

Conservation Criminology promotes thinking about how unsustainable natural resources exploitation is a cause and a consequence of social conflict. Case studies profiled in the book demonstrate this cause and effect type situation, as well as innovative approaches for reducing risks to people and the environment.

This text encourages readers to consider how humans behave in response to environmental risks and the various mechanisms that constitute effective and ineffective approaches to enforcement of wildlife crimes, including environmental and conservation policy. Case studies from the USA, Latin America, Africa, and Asia highlight corruption in conservation, global trade in electronic waste, illegal fishing, illegal logging, human-wildlife conflict, technology and space, water insecurity, wildlife disease, and wildlife poaching.

Taken together, chapters expand the reader's perspective and employ tools to understand and address environmental crimes and risks, and to provide novel empirical evidence for positive change. With established contributors providing interdisciplinary and global perspectives, this book establishes a foundation for the emerging field of conservation criminology.

Green Cultural Criminology - Avi Brisman 2014-06-05

Over the last two decades, "green criminology" has emerged as a unique area of study, bringing together criminologists and sociologists from a wide range of research backgrounds and varying theoretical orientations. It spans the micro to the macro—from individual-level environmental crimes and victimization to business/corporate violations and state transgressions. There have been few attempts, however, to explicitly or implicitly integrate cultural criminology into green criminology (or vice versa). This book moves towards articulating a green cultural criminological perspective. Brisman and South examine existing overlapping research and offer a platform to support future excursions by green criminologists into cultural criminology's concern with media images and representations, consumerism and consumption, and resistance. At the same time, they offer an invitation to cultural criminologists to adopt a green view of the consumption landscape and the growth (and depictions) of environmental harms. Green Cultural Criminology is aimed at students, academics, criminologists, and sociologists with an interest in green criminology and cultural criminology: two of the most exciting new areas in criminology today.

Environmental Crime and Social Conflict - Avi Brisman 2016-03-09

This impressive collection of original essays explores the relationship between social conflict and the environment - a topic that has received little attention within criminology. The chapters provide a systematic and comprehensive introduction and overview of conflict situations stemming from human exploitation of environments, as well as the impact of social conflicts on the wellbeing and health of specific species and ecosystems. Largely informed by green criminology perspectives, the chapters in the book are intended to stimulate new understandings of the relationships between humans and nature through critical evaluation of environmental destruction and degradation associated with social conflicts occurring around the world. With a goal of creating a typology of environment-social conflict relationships useful for green criminological research, this study is essential reading for scholars and academics in criminology, as well as those interested in crime, law and justice.

Power Played - Derek Silva 2022-10-01

This innovative collection argues that modern sport can be characterized by problematic power relations linked to violence, harm, deviance, and punishment. On the one hand, sport is a mainstay of community building, an expression of solidarity, and a means to mental and social health. On the other, there is the star player who commits sexual violence, the trans athlete whose achievements are dismissed as fraudulent, or the racist nationalism of the impassioned sports fan. Power Played illuminates how criminal/judicial discourses and practices reinforce social inequalities and blows the whistle on the harm, violence, and exploitation embedded in sport.

The Oxford Handbook of Criminology - Alison Liebling 2017

Beginning with the history of criminology this updated and revised edition deals with topics as diverse as policing, substance abuse, juvenile crime, statistics, prisons, victims, and organised crime in Britain.

The Palgrave Handbook of Social Harm - Pamela Davies 2021-09-09

This handbook explores the concept of 'harm' in criminological scholarship and lays the foundation for a future zemiological agenda. 'Social harm' as a theoretical construct has become established as an alternative, broader lens through which to understand the causation and alleviation of widespread harm in society, thus moving beyond criminology and state definitions of crime and extending the range of criminological research. Applying zemiological concepts, this book comprehensively explores topics including violence, moral indifference, workplace injury, corporate and state harms, animal rights, migration, gender, poverty, security and victimisation. This definitive work covers theory, research, scholarship and future visions across four sections, and includes contributions from areas such as criminology, sociology, socio-legal and cultural studies, social policy and international relations. It offers readers up-to-date, original theoretical perspectives and an analysis of a broad range of issues from a 'social harm' perspective.
