Child Protective Services - Diane DePanfilis 2003

From the Preface: This manual, *Child Protective Services: A Guide for Caseworkers*, examines the roles and responsibilities of child protective services (CPS) workers, who are at the forefront of every community's child protection efforts. The manual describes the basic stages of the CPS process and the steps necessary to accomplish each stage: intake, initial assessment or investigation, family assessment, case planning, service provision, evaluation of family progress, and case closure. Best practices and critical issues in casework practice are underscored throughout. The primary audience for this manual includes CPS caseworkers, supervisors, and administrators. State and local CPS agency trainers may use the manual for preservice or inservice training of CPS caseworkers, while schools of social work may add it to class reading lists to orient students to the field of child protection. In addition, other professionals and concerned community members may consult the manual for a greater understanding of the child protection process. This manual builds on the information presented in *A Coordinated Response to Child Abuse and Neglect: The Foundation for Practice*. Readers are encouraged to begin with that manual as it addresses important information on which CPS practice is based—including definitions of child maltreatment, risk factors, consequences, and the Federal and State basis for intervention. Some manuals in the series also may be of interest in understanding the roles of other professional groups in responding to child abuse and neglect, including: Substance abuse treatment providers; Domestic violence victim advocates; Educators; Law enforcement personnel. Other manuals address special issues, such as building partnerships and working with the courts on CPS cases.

Strengthening Forensic Science in the United States National Research Council 2009-07-29

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening

Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Dante's Divine Comedy - Mark Vernon 2021-09-03

Dante Alighieri was early in recognizing that our age has a problem. His hometown, Florence, was at the epicenter of the move from the medieval world to the modern. He realized that awareness of divine reality was shifting, and that if it were lost, dire consequences would follow. The Divine Comedy was born in a time of troubling transition, which is why it still speaks today. Dante's masterpiece presents a cosmic vision of reality, which he invites his readers to traverse with him. In this narrative retelling and guide, from the gates of hell, up the mountain of purgatory, to the empyrean of paradise, Mark Vernon offers a vivid introduction and interpretation of a book that, 700 years on, continues to open minds and change lives.

The British National Bibliography - Arthur James Wells 2003

Thinking Like a Lawyer - Frederick Schauer 2009-04-27

This primer on legal reasoning is aimed at law students and upper-level undergraduates. But it is also an original exposition of basic legal concepts that scholars and lawyers will find stimulating. It covers such topics as rules, precedent, authority, analogical reasoning, the common law, statutory interpretation, legal realism, judicial opinions, legal facts, and burden of proof. In addressing the question whether legal reasoning is distinctive, Frederick Schauer emphasizes the formality and rule-dependence of law. When taking the words of a statute seriously, when following a rule even when it does not produce the best result, when treating the fact of a past decision as a reason for making the same decision again, or when relying on authoritative sources, the law embodies values other than simply that of making the best decision for the particular occasion or dispute. In thus pursuing goals of stability, predictability, and constraint on the idiosyncrasies of individual decision-

makers, the law employs forms of reasoning that may not be unique to it but are far more dominant in legal decision-making than elsewhere. Schauer's analysis of what makes legal reasoning special will be a valuable guide for students while also presenting a challenge to a wide range of current academic theories.

Metaphysics as a Guide to Morals - Iris Murdoch 1994-03-01

The decline of religion and ever increasing influence of science pose acute ethical issues for us all. Can we reject the literal truth of the Gospels yet still retain a Christian morality? Can we defend any 'moral values' against the constant encroachments of technology? Indeed, are we in danger of losing most of the qualities which make us truly human? Here, drawing on a novelist's insight into art, literature and abnormal psychology, Iris Murdoch conducts an ongoing debate with major writers, thinkers and theologians—from Augustine to Wittgenstein, Shakespeare to Sartre, Plato to Derrida—to provide fresh and compelling answers to these crucial questions.

Dimensions on Nursing Teaching and Learning - Sheila Cunningham 2020-03-18

The book presents five significant areas of learning within professional programmes of preparation most applicable to student nurses and midwives in their pre-registration education but also with relevance to other learners on healthcare related disciplines. This volume has emerged from several sources: the editor's role as a Director for Learning and Teaching in Adult, Child Nursing and Midwifery and also from an EU funded project looking at quality benchmarks and assuring clinical learning environments (HEALINT). The Francis Report (Francis 2013) and the Shape of Caring Report (Willis 2015) highlighted challenges related to practice learning and mark a renewed focus in its overall significance (Morley et al 2017). In addition to discussions regarding models of support in practice, there is also a clear emphasis on the need for nurses to have the knowledge and skills to undertake more flexible roles and an increasing requirement for nurses to have higher order knowledge and skills at the point of registration, according to the UK Nursing and Midwifery Council (NMC 2017). The book will meet these new educational needs especially for educators working in Nurse and midwife colleges. The new standards of proficiency for pre-registration nursing were published in 2018, with all higher education institutions (HEIs) approved to deliver the programme from September 2019. This creates a demand for a publication which explores the potential impact of a new education approach and issues with preparation (teaching and learning) for nurses and the breadth and dimensions of teaching and learning. NMC proposed roles of Practice Supervisor, Practice Assessor and Academic Assessor will not have a prescribed preparation programme and universities and practice partners will be seeking guidance and direction in developing local programmes of preparation.
