Sapi ens - Yuval Noah Harari 2015-02-10
New York Times Bestseller A Summer Reading

Pick for President Barack Obama, Bill Gates, and Mark Zuckerberg From a renowned historian comes a groundbreaking narrative of humanity's creation and evolution—a #1 international bestseller—that explores the ways in which

biology and history have defined us and enhanced our understanding of what it means to be “human.” One hundred thousand years ago, at least six different species of humans inhabited Earth. Yet today there is only one—homo sapiens. What happened to the others? And what may happen to us? Most books about the history of humanity pursue either a historical or a biological approach, but Dr. Yuval Noah Harari breaks the mold with this highly original book that begins about 70,000 years ago with the appearance of modern cognition. From examining the role evolving humans have played in the global ecosystem to charting the rise of empires, *Sapiens* integrates history and science to reconsider accepted narratives, connect past developments with contemporary concerns, and examine specific events within the context of larger ideas. Dr. Harari also compels us to look ahead, because over the last few decades humans have begun to bend laws of natural selection that have governed life for the past

four billion years. We are acquiring the ability to design not only the world around us, but also ourselves. Where is this leading us, and what do we want to become? Featuring 27 photographs, 6 maps, and 25 illustrations/diagrams, this provocative and insightful work is sure to spark debate and is essential reading for aficionados of Jared Diamond, James Gleick, Matt Ridley, Robert Wright, and Sharon Moalem.

Contextual Teaching and Learning - Elaine B. Johnson 2002

Contextual teaching and learning (CTL) is a system for teaching that is grounded in brain research. Brain research indicates that we learn best when we see meaning in new tasks and material, and we discover meaning when we are able to connect new information with our existing knowledge and experiences. Students learn best, according to neuroscience, when they can connect the content of academic lessons with the context of their own daily lives. Johnson discusses the elements of the brain-compatible contextual teaching and learning system: making meaningful connections; investing school work

with significance; self-regulated learning; collaboration; critical and creating thinking; nurturing the individual; reaching high standards; and using authentic assessment.

Drawing on the practices of teachers in kindergarten through university, Johnson provides numerous examples of how to use each part of the CTL system.

Instructional Design: The ADDIE Approach -

Robert Maribe Branch 2009-10-05
The Analyze, Design, Develop, Implement, and Evaluate (ADDIE) process is used to introduce an approach to instruction design that has a proven record of success. Instructional Design: The ADDIE Approach is intended to serve as an overview of the ADDIE concept. The primary rationale for this book is to respond to the need for an instruction design primer that addresses the current proliferation of complex educational development models, particularly non-traditional approaches to learning, multimedia development and online learning environments. Many entry level instructional designers and students enrolled in related academic programs indicate they are better prepared to accomplish the challenging work of creating effective training and education materials after they have a thorough understanding of the ADDIE principles. However, a survey of instructional development applications indicate that the overwhelming majority of instructional design models are

based on ADDIE, often do not present the ADDIE origins as part of their content, and are poorly applied by people unfamiliar with the ADDIE paradigm. The purpose of this book is to focus on fundamental ADDIE principles, written with a minimum of professional jargon. This is not an attempt to debate scholars or other educational professionals on the finer points of instructional design, however, the book's content is based on sound doctrine and supported by valid empirical research. The only bias toward the topic is that generic terms will be used as often as possible in order to make it easy for the reader to apply the concepts in the book to other specific situations.

A New Grammar Companion for Teachers- Beverly Derewianka 2011

The new edition of this bestselling text employs standard grammatical terminology, but it also uses terms which allow for a more functional interpretation. Aligned with the new Australian Curriculum: English, this edition is organised around the main functions that language plays in our lives: interacting with others, structuring coherent texts and expressing and developing ideas. Another major difference is that the

content now extends into secondary schooling, dealing with the language challenges faced by older students.

The Culture of Education - Jerome Bruner 1996

The One Best System presents a major new interpretation of what actually happened in the development of one of America's most influential institutions. At the same time it is a narrative in which the participants themselves speak out: farm children and factory workers, frontier teachers and city superintendents, black parents and elite reformers. And it encompasses both the achievements and the failures of the system: the successful assimilation of immigrants, racism and class bias; the opportunities offered to some, the injustices perpetuated for others. David Tyack has placed his colorful, wide-ranging view of history within a broad new framework drawn from the most recent work in history, sociology, and political science. He looks at the politics and inertia, the ideologies and power struggles that formed the basis of our

present educational system. Using a variety of social perspectives and methods of analysis, Tyack illuminates for all readers the change from village to urban ways of thinking and acting over the course of more than one hundred years.

Intelligence Reframed - Howard E. Gardner
2000-09-18

Harvard psychologist Howard Gardner has been acclaimed as the most influential educational theorist since John Dewey. His ideas about intelligence and creativity - explicated in such bestselling books as Frames of Mind and Multiple Intelligences (over 200,000 copies in print combined) - have revolutionized our

thinking. In his groundbreaking 1983 book Frames of Mind, Howard Gardner first introduced the theory of multiple intelligences, which posits that intelligence is more than a single property of the human mind. That theory has become widely accepted as one of the seminal ideas of the twentieth century and continues to attract attention all over the world. Now in Intelligence Reframed, Gardner provides a much-needed report on the theory, its evolution and revisions. He offers practical guidance on the educational uses of the theory and responds to the critiques leveled against him. He also introduces two new intelligences (existential intelligence and naturalist intelligence) and argues that the concept of intelligence should be broadened, but not so absurdly that it includes every human virtue and value. Ultimately, argues Gardner, possessing a basic set of seven or eight intelligences is not only a unique trademark of the human species, but also perhaps even a working definition of the

species. Gardner also offers provocative ideas about creativity, leadership, and moral excellence, and speculates about the relationship between multiple intelligences and the world of work in the future.
