Policy Challenges in Modern Health Care - David Mechanic 2005
Health care delivery in the United States is an enormously complex enterprise, and its \$1.6 trillion annual expenditures involve a host of competing interests. While arguably the nation offers among the most technologically advanced medical care in the world, the American system consistently under performs relative to its resources. Gaps in financing and service delivery pose major barriers to improving health, reducing disparities, achieving universal insurance coverage, enhancing quality, controlling costs, and meeting the needs of patients and families. Bringing together twenty-five of the nation's leading experts in health care policy and public health, this book provides a much-needed perspective on how our health care system evolved, why we face the challenges that we do, and why reform is so difficult to achieve. The essays tackle tough issues including: socioeconomic disadvantage, tobacco, obesity, gun violence, insurance gaps, the rationing of services, the power of special interests, medical errors, and the nursing shortage. Linking the nation's health problems to larger political, cultural, and philosophical contexts, *Policy Challenges in Modern Health Care* offers a compelling look at where we stand and where we need to be headed.

Bioethics in a European Perspective - H.A. Ten Have 2013-03-09
This book gives an overview of the most salient themes in present-day bioethics. The book focuses on perspectives typical for the European context. This highlights not only particular bioethical themes such as social justice, choices in health care, and health policy (e.g., in post-communist countries), it also emphasizes specific approaches in ethical theory, in relation to Continental philosophies such as phenomenology and hermeneutics.

Health and Economic Growth Guillem López i Casanovas 2005
Leading international researchers offer theoretical and empirical microeconomic and macroeconomic perspectives on the ways a population's health status affects a country's economic growth.

Health Care, Ethics and Insurance - Tom Sorell 1998
Health Care, Ethics and Insurance provides an essential survey of the key ethical issues in health insurance, providing valuable reading for students and teachers of business studies as well as health professionals.

Health Economics - Peter Zweifel 2009-07-14
This is the most complete text available on the economics of health behavior and health care delivery. Appropriate both for advanced undergraduate and beginning graduate students of economics, this text provides the key analytical tools required to understand current research. Issues discussed include the "cost explosion" in health care, the power of medical associations, the search for remuneration systems with favorable incentives, and technological change in medicine. Rather than simplifying the issues facing today's healthcare systems, the book models existing complexities as they are, adapting economics to reflect the views of the average person.

Patient Engagement - Guendalina Graffigna 2016-01-01
Patient engagement should be envisaged as a key priority today to innovate healthcare services delivery and to make it more effective and sustainable. The experience of engagement is a key qualifier of the exchange between the demand (i.e. citizens/patients) and the supply process of healthcare services. To understand and detect the strategic levers that sustain a good quality of patients' engagement may thus allow not only to improve clinical outcomes, but also to increase patients'

satisfaction and to reduce the organizational costs of the delivery of services. By assuming a relational marketing perspective, the book offers practical insights about the developmental process of patients' engagement, by suggesting concrete tools for assessing the levels of patients' engagement and strategies to sustain it. Crucial resources to implement these strategies are also the new technologies that should be (1) implemented according to precise guidelines and (2) designed according to a user-centered design process. Furthermore, the book describes possible fields of patients' engagement application by describing the best practices and experiences matured in different fields
Local Partnership and Social Exclusion in the European Union - John Benington 2013-12-16

This book explores local partnership-based initiatives to tackle European-wide problems of poverty and social exclusion. A major comparative study of the fast developing theme of social exclusion, the contributors look at its causes, effects and at the ways it might be combatted. Based on in-depth, cross-national research from areas across Europe it provides a uniquely authoritative account of the complexities of policy development in the EU, and will be invaluable to researchers in European studies, politics, and economics.

Examines the rhetorical role of images in communicating environmental ideas.

Faith without Fear - Richard Gist 2021-05-18

Ever felt bitten by a fundamentalist? Or had your biblical understanding discounted by a conservative? Or the validity of your beliefs questioned by a zealous evangelical? If you have, then you will find *Faith without Fear* absolutely therapeutic, with its fresh, honest, and unique approach to both Scripture and the faith. After the publication of his award-winning *You Don't Understand the Bible Because You are Christian* (2014), Richard Gist has reemerged to subtly combat religious theologies that are constructed on a fear of God, those "you must be born again or you will be left out of heaven" approaches to life and Divinity. The antidote: trusting the loving purposes of God and reading Scripture "straight up," that is, rationally, historically, and through sound scholarship. And having fun doing it. Mr. Gist is a United Methodist clergy person who has spent a twenty-three year retirement researching and writing on biblical subjects. He shares his findings honestly, sometimes fervently, and often humorously to vividly open up biblical stories in readable and engaging terms. Again and again the reader will respond, "I never thought of it that way before." He does, however, proceed with the expectation that his audience has both an interest in Scripture and a modest acquaintance with its content. The book asks probing questions, but following Old Testament writing techniques, does not provide answers. Everyone has to think for themselves. Mr. Gist explores some stories through the question, cui bono? Who profits from telling the story this way? Have you ever done that before in your Bible studies? It leads to new places. The author sometimes strays beyond Scripture to share personal stories, offer spiritual insights, and to present a smattering of philosophy. The Table of Contents provides a few

hints of what you will find in the book. Undergirding everything is the author's absolute trust in the unconditional love of God. As the title of the book suggests, fear should not be a part of our relationship with the Divine. "God never forgives because God never condemns."

Terminology on Statistical Metadata - United Nations. Statistical Commission 2000

This publication was prepared at the request of countries participating in the activities on statistical metadata organised by the United Nations/Economic Commission for Europe Statistical Division. The aim of the publication is to assist national and international statistical offices on problems dealing with the development and implementation of statistical metainformation systems. The development of standard terminology will also help to facilitate access, sharing, comparing and understanding of statistics across national boundaries. Over 230 terms are defined relating to: metadata collection; storing, organising and searching metadata; metadata and metainformation system's functions (identification, location, retrieval, processing, analysis and interpretation); metadata models and holdings; metadata administration and dissemination. Concepts are defined in natural language and are organised in the thesaurus structure.

2020 Development Effectiveness Review - Asian Development Bank 2021-04-01

This publication outlines the performance of the Asian Development Bank (ADB) in achieving the goals of Strategy 2030, the institution's long-term strategic framework. It is the 14th in the series of annual reports that tracks development progress in Asia and the Pacific, assesses ADB's development effectiveness, and identifies areas where the institution's performance needs to be strengthened.

How to Have Creative Ideas Edward de Bono 2012-05-31

Everybody wants to be creative. Creativity makes life more fun, more interesting and more full of achievement, but too many people believe that creativity is something you are born with and cannot be learned. In *How to Have Creative Ideas* Edward de Bono - the leading authority on creative thinking - outlines 62 different games and exercises, built around random words chosen from a list, to help encourage creativity and lateral thinking. For example, if the task were to provide an idea for a new restaurant and the random word chosen was 'cloak', ideas generated might be: a highwayman theme; a Venetian theme with gondolas; masked waiters and waitresses. Or, if asked to make a connection between the two random words 'desk' and 'shorts', readers may come up with: both are functional; desks have 'knee holes' and shorts expose the knees; traditionally they were both male-associated items. All the exercises are simple, practical and fun, and can be done by anyone.

Confucian China and Its Modern Fate - Joseph Richmond Levenson 1968

Mental Health Service Evaluation Helle Charlotte Knudsen 1996-03-14

A comprehensive international review providing guidance in appropriate research strategies for evaluation of mental health services.

The World of Catholic Renewal, 1540-1770 - R. Po-Chia Hsia 2005-05-12

Innovations in Health Care - Ann Casebeer 2006-06-16

Innovations in Health Care is the fourth title in an ongoing series from the biennial conference Organizational Behaviour in Health Care. It compiles case examples of innovations within complex healthcare settings that are working, providing some credible and valuable examples of what can be and has been accomplished through organizational change. It also explores a range of cases where innovations were hindered or blocked from completing or sustaining across time, critically examining where current theories and practices are falling short and why there are problems that remain unsolved.

EU Law and the Social Character of Health Care - Elias Mossialos

2002

European law is an increasingly important factor in the development and implementation of national and local health policy. Yet for many it remains shrouded in mystery. The situation with regard to laws impacting on health care is especially problematic as, typically, consequences arise from policies designed primarily to address problems in other sectors, which then establish general principles whose applicability to health care only becomes apparent once interpreted by rulings of the European Court of Justice. This book, written with the health and social policy community in mind, provides a comprehensive assessment of the main implications of EU law in certain key areas of health care.

Health Care Choices - Clark C. Havighurst 1995

This text argues that private contracts would allow for more and genuine consumer choice, based on real differences between competing health plans in content, mixture and cost of services. It further argues that contracts would establish set standards and obligations for all parties.

Oxford Handbook of Public Health Practice - Charles Guest 2013-02-28

Fully revised and updated for the third edition, the *Oxford Handbook of Public Health Practice* remains the first resort for all those working in this broad field. Structured to assist with practical tasks, translating evidence into policy, and providing concise summaries and real-world issues from across the globe, this literally provides a world of experience at your fingertips. Easy-to-use, concise and practical, it is structured into seven parts that focus on the vital areas of assessment, data and information, direct action, policy, health-care systems, personal effectiveness and organisational development. Reflecting recent advances, the most promising developments in practical public health are presented, as well as maintaining essential summaries of core disciplines. This handbook is designed to assist students and practitioners around the world, for improved management of disasters, epidemics, health behaviour, acute and chronic disease prevention, community and government action, environmental health, vulnerable populations, and more.

Baba Dunja's Last Love - Alina Bronsky 2016-06-09

Baba Dunja is a Chernobyl returnee. Together with a motley bunch of former neighbours, they set off to create a new life for themselves in the radioactive no-man's land. Geiger counter and irradiated forest fruits be damned, there in that abandoned patch of Earth they have everything they need. Terminally ill Petrov passes the time reading love poems in his hammock; Marja takes up with 100-year-old Sidorow; Baba Dunja whiles away her days writing letters to her daughter... rural bliss reigns, until one day a stranger turns up in the village, and the small settlement faces annihilation once again. With her trade-mark wry humour Bronsky tells the story of a community that shouldn't exist, and of a very unusual woman who late in life finds her own version of paradise.

Applied Health Economics Andrew M. Jones 2013-05-07

The first edition of *Applied Health Economics* did an expert job of showing how the availability of large scale data sets and the rapid advancement of advanced econometric techniques can help health economists and health professionals make sense of information better than ever before. This second edition has been revised and updated throughout and includes a new chapter on the description and modelling of individual health care costs, thus broadening the book's readership to those working on risk adjustment and health technology appraisal. The text also fully reflects the very latest advances in the health economics field and the key journal literature. Large-scale survey datasets, in particular complex survey designs such as panel data, provide a rich source of information for health economists. They offer the scope to control for individual heterogeneity and to model the dynamics of individual behaviour. However, the measures of outcome used in health economics are often qualitative or categorical. These create special problems for estimating econometric models. The dramatic growth in computing power over recent years has been accompanied by the development of methods that help to solve these problems. The purpose of this book is to provide a practical guide to the skills required to put these techniques into practice. Practical applications of the methods are illustrated using data on health from the British Health and Lifestyle Survey (HALS), the British Household Panel Survey (BHPS), the European Community Household Panel (ECHP), the US Medical Expenditure Panel Survey (MEPS) and Survey of Health, Ageing and Retirement in Europe (SHARE). There is a strong emphasis on applied work, illustrating the use of relevant computer software with code provided for Stata. Familiarity with the basic syntax and structure of

Stata is assumed. The Stata code and extracts from the statistical output are embedded directly in the main text and explained at regular intervals. The book is built around empirical case studies, rather than general theory, and the emphasis is on learning by example. It presents a detailed dissection of methods and results of some recent research papers written by the authors and their colleagues. Relevant methods are presented alongside the Stata code that can be used to implement them and the empirical results are discussed at each stage. This text brings together the theory and application of health economics and econometrics, and will be a valuable reference for applied economists and students of health economics and applied econometrics.

Videoinight - Rebecca Luciana Russo 2010

Addiction Neuroethics - Adrian Carter 2011-10-04

Research increasingly suggests that addiction has a genetic and neurobiological basis, but efforts to translate research into effective clinical treatments and social policy needs to be informed by careful ethical analyses of the personal and social implications. Scientists and policy makers alike must consider possible unintended negative consequences of neuroscience research so that the promise of reducing the burden and incidence of addiction can be fully realized and new advances translated into clinically meaningful and effective treatments. This volume brings together leading addiction researchers and practitioners with neuroethicists and social scientists to specifically discuss the ethical, philosophical, legal and social implications of neuroscience research of addiction, as well as its translation into effective, economical and appropriate policy and treatments. Chapters explore the history of ideas about addiction, the neuroscience of drug use and addiction, prevention and treatment of addiction, the moral implications of addiction neuroscience, legal issues and human rights, research ethics, and public policy. Features outstanding and truly international scholarship, with chapters written by leading experts in neuroscience, addiction medicine, psychology and more. Informs psychologists of related research in neuroscience and vice versa, giving researchers easy one-stop access to knowledge outside their area of specialty

Valuing Health Care - Frank A. Sloan 1996-08-28

As expenditure on health care has increasingly become an area of public debate and concern, public and private health care decision-makers have called for more rigorous use of cost-benefit and cost-effectiveness analysis to guide spending. Concerns have arisen, however, about the overall quality of such analyses. This book discusses and evaluates best-practice methods of conducting cost-benefit and cost-effectiveness studies of pharmaceuticals and other medical technologies. It encompasses a wide variety of topics, ranging from measuring cost and effectiveness to discounting to the use of dynamic modelling of cost-effectiveness. The book also includes conceptual and practical aspects of cost-effectiveness analysis by researchers who have conducted applied research in these areas. Rarely does the book provide a singular solution to a measurement problem; rather, the reader is directed to choices among alternative approaches and an analysis of the advantages and disadvantages of each.

Health Care 2020 - William Styring, III 1999

In the year 2011, the U.S. will begin to experience the biggest age-driven demographic upheaval in its history, as the first Baby Boomers reach age 65. In 2010, the ratio of adults in prime working years, ages 25-64, to those 65 and over will be 4 to 1. By 2020, it will fall to 3 to 1. By 2030, it will drop to almost 2 to 1. The ratio of potential workers to potential retirees will be cut in half in only two decades. The U.S. is not alone. The end of World War II caused similar spikes in birth rates in much of the world. Western Europe's birth rate is already below population replacement levels. Japan is aging at an even faster rate. The social and public policy consequences of this "graying" of America are hard to overestimate. Social Security and Medicare will have to be cut back through some combination of reducing benefits and raising normal retirement ages; otherwise, the tax rates on the young are politically unthinkable. Above all, the health care system will have to change. Cheaper but effective ways of caring for the elderly short of costly institutionalization will be imperative. For example, current attempts to curtail home health care programs are not the way to go. The large numbers of Boomers will radically change health insurance, and Health Care 2020 tells what health care will be like in the next century.

Civiltà Villanoviana ed Etrusca - Luciano Pallottini

The Future of Health Policy - Victor R. Fuchs 1993

Fuchs (economics, Stanford U.) presents the basic concepts and facts necessary to understand the ongoing debate about health care reform in the US. Any program that benefits society as a whole will inevitably burden certain individuals and groups, he says, and the critical issues are decoupling health care from employment, taming but not destroying technological advances, and coping with the increased costs of an aging population. Economic Analysis in Health Care - Stephen Morris 2007-06-04

Health economics is concerned with the evaluation of the effectiveness of health care, particularly by examining the social opportunity costs of alternative forms of treatment. The peculiar nature of the market for health care - that doctors have a major influence on both supply and demand - has attracted attention, as has the study of the options available for financing such services. Economic Analysis in Health Care provides a comprehensive coverage of both the economics of health care systems and the evaluation of health care technologies. It has been written as a core textbook for advanced undergraduate and postgraduate students with knowledge of economic analysis and will appeal to an international audience. Adopts an international perspective, using examples and case studies from the UK, the rest of Europe, and other countries. Contains detailed exposition of the economic theory alongside relevant examples and applications. Focuses on both market-related and economic evaluation aspects of health economics (some books focus purely on market-related aspects). Strong author team with very broad experience of writing and teaching health economics

A Calabrian in Rome - Aldo Armentano 2016

Michele is a Calabrian boy who grew up in a dignified misery, in the fragile illusions and in the willing of redemption of Italy after the war. Searching for solid prospects for his future, one day decided to leave his birth place and move to Rome. The yearning and the initial disorientation typical of the migrants is relieved from an encounter with a retired high official, who offered him an employment opportunity and who welcomed him in his own house, proving to be a paternal and loving host. With his support and precious suggestions Michele will reach a tiresome balance between work and study, and will learn to orient through the woods of the first love sentiments. The domestic tranquility and together with the stability of the routine, however, will be suddenly violated from a murder that has mysterious contours, that delineate a disturbing scenario of the Cold War. Nothing in Michele's life will remain the same. A bildungsroman crosses through twenty years in the history of contemporary Italy, years of the 1950s and 1960s with the delicacy and lucidity of a small fresco of the generation.

The Politics of Post-Industrial Welfare States - Klaus Armingeon 2007-01-24

This new study assesses the welfare state to ask key questions and draw new conclusions about its place in modern society. It shows how the welfare states that we have inherited from the early post-war years had one main objective: to protect the income of the male breadwinner. Today, however, massive social change, in particular the shift from industrial to post-industrial societies and economies, have resulted in new demands being put on welfare states. These demands originate from situations that are typical of the new family and labour market structures that have become widespread in western countries since the 1970s and 1980s, characterised by the clear prevalence of service employment and by the massive entry of women in the labour market. Against this background, this book: * presents a precise and clear definition of 'new social risks'. A concept being increasingly used in welfare state literature. * focuses on the groups that are mostly exposed to new social risks (women, the young, the low-skilled) in order to study their political behaviour. * assesses policymaking processes that can lead to successful adaptation. It covers key areas such as child care, care for elderly people, adapting pensions to atypical career patterns, active labour market policies, and policy making at the EU level. This book will be of great interest for all students and scholars of politics, sociology and the welfare state in particular.

The Principles of Targeting - Timothy Besley 1990

Administrative and data-collection costs, individual responses to target interventions, and considerations of political economy make it difficult to establish workable procedures for fine targeting of spending to alleviate poverty. Self-targeting and targeting by indicators offer more advantages than other approaches.

Reforming the Health Care Market - David F. Drake 1994-09-19

Examining the health care market in a historical framework, Drake analyzes the forces and events that have shaped American health care in the twentieth century and sheds new light on why and how our health

care system has dampened competitive market forces and failed to provide sound value for much of our health care expenditures. He examines the roles that physicians, hospitals, insurance companies, businesses, individual consumers, and government legislation have played in creating a provider-dominated market in which the cost of care has been concealed from consumers. Comparing U.S. health care expenditures with those of other developed countries, he concludes that a significant part of our health care problem is the style of medicine practiced in the United States, which is much more specialized and high tech than in other developed nations. Drake develops proposals for health care financing reform that consider the political and economic difficulties involved. He first examines the Clinton health care reform plan and makes specific recommendations for revisions that would improve its likelihood of controlling costs. He then offers an alternative proposal that would both maintain the principle of universal, noncancelable coverage and eliminate the flaws in the market for health

care services by giving consumers a financial stake in cost containment. This timely argument, combining economic and historical analysis with thoughtful consideration of the motivating humanitarian and political concerns, will be of interest to everyone seeking to understand and to reform our ailing health care system.

Public Health at the Crossroads - Robert Beaglehole 2004-04-22
Reviewing epidemiological and demographic trends internationally, this book provides an overview of major health trends, summarises the current state of the world's health, and reviews recent estimates of the global burden of disease.

The Evolution of the British Welfare-State - Derek Fraser 2009-06-16
Derek Fraser's book has established itself as a classic text on the history of social policy and social ideas in Britain since the Industrial Revolution. This fourth edition features a revised Introduction, incorporates the latest research and extends the coverage of the final chapter, bringing the story right up to the present day.
