## **On Apologising in Negative and Positive Politeness Cultures** - Eva

Ogiermann 2009-10-28

This book investigates how speakers of English, Polish and Russian deal

with offensive situations. It reveals culture-specific perceptions of what counts as an apology and what constitutes politeness. It offers a critical discussion of Brown and Levinson's theory and provides counterevidence to the correlation between indirectness and politeness underlying their theory. Their theory is applied to two languages that rely less heavily on indirectness in conveying politeness than does English, and to a speech act that does not become more polite through indirectness. An analysis of the face considerations involved in apologising shows that in contrast to disarming apologies, remedial apologies are mainly directed towards positive face needs, which are crucial for the restoration of social equilibrium and maintenance of relationships. The data show that while English apologies are characterised by a relatively strong focus on both interlocutors' negative face, Polish apologies display a particular concern for positive face. For Russian speakers, in contrast, apologies seem to involve a lower degree of face threat than they do in the other two languages.

**The Visible Word** - Johanna Drucker 1994

Drucker skillfully traces the development of this critical position, suggesting a methodology closer to the actual practices of the early avant-garde artists based on a rereading of their critical and theoretical writings. After reviewing theories of signification, the production of

meaning, and materiality, she analyzes the work of four poets active in the typographic experimentation of the 1910s and 1920s: Ilia Zdanevich, Filippo Marinetti, Guillaume Apollinaire, and Tristan Tzara. Drucker explores the context for experimental typography in terms of printing, handwriting, and other practices concerned with the visual representation of language. Her book concludes with a brief look at the ways in which experimental techniques of the early avant-garde were transformed in both literary work and in applications to commercial design throughout the 1920s and early 1930s.

Long-Term Health Effects of Participation in Project SHAD (Shipboard Hazard and Defense) - Institute of Medicine 2007-08-03

More than 5,800 military personnel, mostly Navy personnel and Marines, participated in a series of tests of U.S. warship vulnerability to biological and chemical warfare agents, Project SHAD (Shipboard Hazard and Defense), in the period 1962-1973. Only some of the involved military

personnel were aware of these tests at the time. Many of these tests used simulants, substances with the physical properties of a chemical or biological warfare agent, thought at the time to have been harmless. The existence of these tests did not come to light until many decades later. In September 2002, the Institute of Medicine (IOM) agreed to undertake a scientific study, funded by the Veterans' Affairs, of potential long-term health effects of participation in Project SHAD. In general, there was no difference in all-cause mortality between Project SHAD participants and nonparticipant controls, although participants statistically had a significantly higher risk of death due to heart disease, had higher levels of neurodegenerative medical conditions and higher rates of symptoms with no medical basis. Long-Term Health Effects of Participation in Project SHAD focuses on the potential health effects of participation in Project SHAD. It is a useful resource for government defense agencies, scientists and health professionals.
