Services Marketing - C. Bhattacharya 2009

While most books on marketing and services are readable, very few take the student's viewpoint and set out to answer the question Is it understandable? in the affirmative. This book and its pedagogy has been designed precisely with this in mind: v Design: The book has a consistency of design that is innovative, with aesthetic appeals. v Opening and Closing Cases: Every chapter begins and ends with a case. The cases introduce the primary theme and issues discussed in the chapter and closes with analytical tasks for the students. The cases are original, pertaining to Indian situations, companies and protagonists, helping the Indian students to connect. v Objectives: Every chapter has clear learning expectations, get a glimpse of the chapter context and their respective importance. v End-of-chapter Questions: The questions are many and have been designed carefully to enhance learning for the students. There are elements of research, project work, and academic exercises in them. v Illustrations: The book is generous with pleasing and informative charts, tables and diagrams. v Glossary: The Appendix at the end of the book contains a glossary of services and marketing terminologies. v Marketing models: In addition to the text, the appendix also contains major marketing models mentioned in the text, which are frequently used by the marketers. v How to do cases: The Appendix also contains a useful section for all students a template for case discussion and analysis. There are four parts in the book. Part I takes an overview look at the major differences between services and goods and their characteristics, classifications and different models. It methodically analyses the section on the local, domestic and international conditions and environment factors that have affected services. It also examines the importance of Relationship Marketing in services. Part II examines in-depth the marketing of services. It looks sweepingly and with depth at marketing planning and strategy, service buying behaviour, knowledge management and marketing research in services, and the seven marketing mix variables for services. Part III is about the assessment of service delivery and customer relationship management. Part IV deals exclusively with comprehensive service cases. The cases are in addition to the opening and closing cases. The book lucidly explains the basic concepts of services and marketing and fills a long-standing need of the students for a book on both services and marketing.

Fixing Higher Education - Christian Schierenbeck 2012-11-06

Christian Schierenbeck makes a provocative case that higher education across the globe suffers from a profound productivity crisis which prevents broad access to affordable and high-quality educational services. He shows how the vast productivity gap in higher education could be closed if academic managers borrowed some of the managerial practices applied by the world's leading business enterprises. In order for this to happen in practice, the author argues for radical changes in the policy framework for higher education.

Youth Gambling - Jeffrey L. Derevensky 2011-10-27

Youth gambling represents a potentially serious public policy and health issue. Nevertheless, the rise in youth gambling issues and problems in the global context is not matched with a parallel increase in research on adolescent gambling. Recently significant advances in the knowledge of the risk factors associated with adolescent problems has emerged. This book addresses issues related to prevalence, assessment, prevention and treatment of youth gambling problems as well as concerns related to technological changes associated with youth problem gambling.

Problem Gambling in Europe - Gerhard Meyer 2009-04-29

Problem Gambling in Europe Challenges, Prevention, and Interventions Edited by Gerhard Meyer, University of Bremen, Germany Tobias Hayer, University of Bremen, Germany Mark Griffiths, Nottingham Trent University, United Kingdom As a leisure activity, gambling dates back to ancient times. More recently, the surge in avenues for gambling—casinos, sports betting, lotteries, and remote media (e.g., Internet, mobile phone, interactive television) among them—finds growing numbers of people losing control over their gambling behaviour, usually at great personal and financial expense. Problem Gambling in Europe is the first book to offer a robust international knowledge base compiled by an interdisciplinary panel of researchers in gambling behaviour. Reports from 21 countries throughout Western, Eastern, Northern, and Southern Europe reveal wide variations in types of wagering activities, participation by populations, social and criminal consequences related to pathological gambling, the extent to which governments acknowledge the problem, and efforts to control it (often with the involvement of the gaming industries). For each country, noted experts discuss: Current legislation regulating gambling. Forms of gambling and their addictive potential. Participation rates and demographics. Prevalence of pathological gambling. National policies to address problem gambling. Prevention strategies and treatment methods. Problem Gambling in Europe brings insight and clarity to a widespread and complex phenomenon, and will be of considerable interest to all parties working to reduce their negative effects: social science researchers in addictions, gambling behaviour, and public health; clinical, social, and health psychologists and psychiatrists; treatment practitioners; the gaming industry; regulators; and policy makers.
